

OTIF

PRESTIGE LINE 2.0

THE UNIQUE BEAUTY OF STEEL AND GLASS

DESIGN YOUR SPACE

Our OTIF brand was created out of passion for the beauty hidden in steel and glass and the belief that everyone deserves the highest quality of the product. Bearing in mind the importance of details, we make sure that the solutions we provide every day for use in your homes, offices and apartments, are made with the highest aesthetics. Two professional production facilities with the most modern machinery, our own powder paint shop and glass processing together with a team of excellent specialists, guarantee the best quality of products.

We present you the Prestige line 2.0, which is a synonym of elegance and timelessness. Slenderness and delicacy of Prestige 2.0 profiles allows you to maintain easy access to daylight in all the rooms. Among all the solutions we offer one can find more loft-style designs, as well as more minimalistic or referring to the classic style. The vast range of possibilities included in the Prestige line 2.0 allows you to creatively design your own space in a beautiful way and functional at the same time.

COLOURS OF FRAMES

Black, white or maybe your favourite one? Products of the Prestige line 2.0 are painted with the top quality of powder coating used in façade production. The coating is applied using the powder painting method, which provides a hard and durable structure. Apart from the colour base chosen by architects, we can also select a colour from, the international RAL palette.

Black
RAL 9005 (Jet black)

White
RAL 9003 (Signal white)

Charcoal
RAL 7021 (Black grey)

Any colour
for RAL palette
upon request

PRESTIGE 2.0 – TYPES OF BARS

The cross-section of the frame and door leaf with a Viennese bar

The basic type is a Viennese bar with a cross-section of 5x20mm.

The cross-section of the frame and door leaf with a construction bar

For large glazing sizes or on special request, the hinge side can be fitted with a construction bar with dimensions of 20x25 mm.

PRESTIGE 2.0 – INSTALLATION GUIDELINES

The installation of the hinged door frame

- assembly should be performed on the ready, target floor
- the mounting hole must be even in height and width
- it is advised to check whether the mounting recess has all the right angles
- the use of mounting foam is not recommended
- it is necessary to dowel the frame
- the optimal place for mounting hinged doors and pivots is the axis of the wall
- due to the heavy weight of the construction (approx. 30-33 kg / m²) doors must be only fitted with solid materials
- all elements of the construction must always be transported by two persons, faulty handling may result in damage to the construction
