

To Whom It May Concern,

It is my pleasure to provide this letter of reference for **Jennifer Lutin, PhD, MA, MetDip**, whose longstanding partnership with the Jacksonville Science Festival has been invaluable to our mission of expanding equitable access to high quality STEM learning.

Dr. Lutin has served as a dedicated sponsor and collaborator for many years, generously volunteering her **mobile planetarium** as a signature exhibit at the festival. Her expertise in astronomy education, combined with her commitment to hands on, inquiry based learning, has created an unforgettable experience for thousands of K–12 students who attend our annual field trip days.

In addition to her direct contributions, Dr. Lutin has played a key role in our ongoing collaboration with the **Museum of Science and History (MOSH) Jacksonville**. Her ability to integrate scientific accuracy, engaging storytelling, and student centered instruction has elevated the quality of our programming and strengthened our partnership with the museum.

Dr. Lutin's professionalism, generosity, and passion for science education make her an exceptional community partner. Her work has had a measurable impact on students across Northeast Florida, inspiring curiosity, expanding access to STEM experiences, and supporting our shared vision of educational equity.

I recommend her without reservation for any opportunity that values leadership, expertise, and a deep commitment to community enrichment.

Sincerely,

Tia Frick

Community Engagement Director and Jacksonville Science Festival Representative
