

Mr. Sorkin has been an internal part of ITB for over 15yrs. His extensive background managing projects for aerospace related organizations has given him the knowledge and ability to seek and collaborate with diverse sources to fulfill new challenging project requirements. From 2006-2017 he served as Principal Senior Engineer at the NASA Technology Evaluation for Environmental Risk Mitigation (TEERM) Principal Center located at Kennedy Space Center, Florida. Sorkin was fundamental in providing engineering support for the NASA HQ Environmental Management Division. His areas of expertise include collaborative activities in energy efficiency technologies, renewable energy, hydrogen & fuel cells, energy and water resiliency. International technical collaboration development is also within his responsibilities.
