

Groundhog Mining & Milling Co., LLC is a family-owned and operated company with a mission to provide an all-encompassing mining and exploration service for the health and welfare of mankind. We have participated in all phases and operations of underground and surface mining, drilling, reclamation, and more. With the experience of multiple generations of mining engineers, we have completed projects of varying sizes and operational stages with traditional methods as well as modern. We do everything from claim staking to developing and building your operation. We have worked as the only contractor on a site as well as in conjunction with larger companies and multiple contractors. We build custom portable mills, repair damaged portals, restructure compromised drifts; everything you need from your mining contractor, Groundhog will deliver.

Construction, Development, Exploration, & Rehabilitation

Groundhog will engineer, design, and assist you in your mineral ventures; we can survey, develop, and build your operations. Groundhog is fully equipped and capable of building surface infrastructure and providing surface or underground development.

Development- We'll assist in establishing portals, driving drift, standing rail, pioneering roads, and everything else you require.

Rehabilitation - Re-opening an old mine? Whether it be re-timbering an old portal, installing ground support in the main drift, spiling through a cave-in, or rehabbing a raise, we can get you to the face.

Our drillers produce quality results with maximum core recovery.

Engineering & Consulting

Whether you need a basic or a more in-depth evaluation of effective mining methods, pumping requirements, ground support, materials handling, etc, we can help.

We are able to work with you, the state, and federal entities to prepare your permits and ensure your good standing reputation with all governing authorities.

Custom Milling

A difficult aspect of a mining operation is the ability to produce a marketable product. Groundhog is capable of designing, and custom building, a fixed or portable mill.

Assay/Geotechnical Labs

We have portable labs to suit your needs - for purchase or rent.
