Adapted from Bang et al., Ann Intern Med 151:775–783, 2009.

Original algorithm was validated without gestational diabetes as part of the model.

Type 2 diabetes is more common in African Americans, Hispanics/Latinos, Native Americans, Asian Americans, and Native Hawaiians and Pacific Islanders.

diabetes. However, only your doctor can tell for sure if you do have type 2 diabetes or

prediabetes, a condition in which blood glucose

enough to be diagnosed as diabetes. Talk to your

levels are higher than normal but not yet high

doctor to see if additional testing is needed.

Higher body weight increases diabetes risk for everyone. Asian Americans are at increased diabetes risk at lower body weight than the rest of the general public (about 15 pounds lower). The good news is you can manage your risk for type 2 diabetes. Small steps make a big difference in helping you live a longer, healthier life.
