

Plunge pool cover clip and buckle installation: PURE PLUNGE

If you would like to lock your pool cover, you will need to secure the clip to the pool, deck or another structure. You have two options in this scenario.

Option 1:

Secure the buckle to the outer side of the pool using 316 grade stainless steel 6g x 12mm screws which can be purchased at Bunnings. **DO NOT USE** the screws supplied with the cover, these can be discarded.

Option 2:

Secure the buckle to a structure within reach of each clip on the cover, This could be a deck built to the height of the pool cover clips or another structure. Use suitable screws for the material you are securing the clips into.

Install instructions

Step 1:

Position the cover on top of the pool so it is positioned in a way that the cover folds in the direction that works best for the location of the pool. Ensure the cover is snug on the pool edge and positioned level and straight.

Step 2:

Unclip the buckle on each strap and position the buckle on the pools outer edge so the top of the buckle is inline with the seam near the top edge of the pool. The buckle should look upside down. Once in position, use a cordless driver with a Philips head bit to secure the buckle to the pool using 316 grade stainless steel 6g x 12mm screws which can be purchased at Bunnings. Continue this process with all clips and buckles you wish to secure the cover down.

IMPORTANT: DO NOT USE the screws supplied with the cover. Please discard them.
