# Managing Enterprise Networks with Cisco Prime Infrastructure

## MENPI

## Course Overview

The Managing Enterprise Networks with Cisco Prime Infrastructure (MENPI) v4.1 is a 5-day instructor-led course that teaches how to manage your network with Cisco Prime Infrastructure by adding devices, managing inventory, creating reports, creating wired and wireless device maps, monitoring the network, managing device configurations, managing device compliance, and performing system administration tasks.

This course also introduces the various services and options available with Cisco Prime Infrastructure.

## Objectives

Upon completing this course, the learner will be able to meet these overall objectives:

- Navigate the GUI and access the CLI for Cisco Prime Infrastructure
- Add to and manage devices in the Cisco Prime Infrastructure inventory
- Create network maps for wired, wireless, and data centre devices
- Create and manage virtual domains and users
- Manage device configurations
- Manage device compliance
- Describe several of the services and options offered by Cisco Prime Infrastructure
- Monitor the network using dashboards, maps, and reports
- Perform system administrative tasks, including monitoring the health of the system and network and performing server backups

## Prerequisite Knowledge

To fully benefit from this course, you should have the following knowledge and skills:

- Knowledge of networks and networking terminology that can be gained from the CCNA course
- Knowledge of wireless networks and wireless networking terminology Previous training in, or experience with, network administration, management, and troubleshooting

Real skills for real engineers
