Cisco Stealthwatch Foundations

SF

Course Overview

Modern enterprise networks are larger and more complex than ever before, so it takes a robust and complex system like Cisco Stealthwatch Enterprise to defend them. The same complexity that makes Stealthwatch such a powerful tool can also make it seem intimidating to new users. It is important to understand the system's foundational concepts and terminology before delving into its detailed processes and procedures.

The Cisco Stealthwatch Foundations (SF) training introduces Stealthwatch Enterprise and provides foundational information to ensure that you understand basic concepts and terms.

Objectives

Upon completing this course, the learner will be able to meet these overall objectives:

- Describe the Stealthwatch System, how it works, and how it adds value
- Explain network behavior analysis and baselining
- Summarize how Stealthwatch uses flow to provide network visibility
- Define the purpose, primary characteristics, and Stealthwatch classifications of hosts and host groups
- Describe the Stealthwatch detection model

Prerequisite Knowledge

This course has no pre-requisites

Real skills for real engineers
