Cisco Stealthwatch Administrator

SSA

Course Overview

Cisco Stealthwatch Administration (SSA) v6.10 course focuses on a step-by-step framework for completing the initial configuration tasks required to get Cisco Stealthwatch Enterprise up and running. You'll experience hands-on lab activities that focus on the critical initial configuration steps that allow Stealthwatch to monitor flows and network behavior and to provide insights that you can use to determine next steps, such as what policies are needed to manage the data presented.

This course will help you to understand key system features and customized settings to ensure that the Stealthwatch System is configured correctly.

Objectives

Upon completing this course, the learner will be able to meet these overall objectives:

- Validate network configuration of Cisco Stealthwatch appliances
- Set base SMC configuration values
- Use SMC documents and reports to determine if exporters are set up properly
- Use SMC documents and reports, to determine IP addresses that belong to your organization
- Place hosts into appropriate host groups
- Define services and applications
- Add Stealthwatch users with specific roles
- Create custom documents
- Establish response management rules, triggers, and actions

Prerequisite Knowledge

It is strongly recommended to complete the Stealthwatch Foundations training prior to taking this course.

Real skills for real engineers
