# Education is Job 1

tag4life™ provides education to individuals and groups on the need for medical IDs and helps to cover their cost - no questions asked. Our primary focus is on leveling the playing field for members of underprivileged and disadvantaged communities. We also work with organizations to provide medical IDs to those in need, free of charge.

# Donate Now and Get a Free Gift!

Go to https://tag4life.org/store, or open the camera app on your smartphone and click on the QR code below to get to our online store. Your contribution can help us provide medical IDs for medically vulnerable people. Depending on the amount of the donation you can also get a Medical ID product back as a gift from us at no additional charge (we even pay shipping). Thanks so much for your support!

# What is a Medical ID?

A medical ID is a wearable accessory or ID card that contains or allows access to the user's critical personal and medical information. This medical ID is recognized by first responders and the medical community which helps identify individuals who have an important medical condition that may require special treatment. In an emergency situation, when a person can not speak for themselves, it's imperative that this information about a person's medical history is easily accessible. A medical ID helps to prevent misdiagnosis, unwanted drug reactions, and treatments that could pose serious risk.

**At tag4life™, we shine a powerful light on medically vulnerable people who, for whatever reason, can't speak for themselves. We do this by helping to cover the cost of their medical IDs – no questions asked.**

# Who Should Wear a Medical ID?

Individuals who have physical or mental medical conditions, take medications or have food or drug allergies should wear a medical ID.

# What are the Different Types of Medical IDs?

Medical IDs have evolved over time into many forms of decorative bracelets and necklaces. There are also slide-on watch band sleeves. IDs can have directly imprinted information, a scannable QR code, or a telephone number that links to the medical ID company who stores your data.
