

M 134 BDASS KIT

DAYCRAFT
SYSTEMS 

The BDASS kit upgrades all versions of the M-134 Minigun into a modern, flexible weapon system capable of integration into ground and aerial platforms -including remote weapon stations.

- Preset selectable rates can be quickly adjusted to balance the resonance of any aircraft without changing existing mounts.
- Rates of fire can be switched without firing interruption.
- Low rate of fire options to support training and lower costs.
- Due to its motor controller and GCU, BDASS prevents operator error from destroying or severely damaging legacy systems.
- Booster assembly not required and is optional within the weapon system.
- Adds capability to fire without ammunition chute attachment.
- Lightweight battery option allows gun to be dismantled and or operated without vehicle power.

LIGHTWEIGHT UPGRADE

CONTENTS OF KIT	New Motor Gear Box Brushless DC motor Upgraded Gun Control Unit (GCU) Power Cable Power Supply		
Operations	Rate Selector Switch	Trigger utilisation	Outcome
	Configurable	One	Fires at the selected rate
