Introduction:

Cancer of prostate is one of the most common diseases in males. The success in treatment of this type of cancer depends on early diagnostics and correct therapy.

Subject:

Patient: B. B., male, 72 years, comes to the urologist with troubles in his genital area. Diagnosis: cancer of the prostate, non operable.

CT: tumor 9 cm, Lab: S-PSA 135,12 ug/L ; F-PSA 19,56 ug/L ; Index PSA 14,48%.
Treatment: standard oncology and urology protocols. No improvement.

In the middle of 2014 the patient comes to our center, AMP analysis shows the above mentioned data. We add to the standard protocols of treatment Planet of Health oils: No. 10, 58, 89, 90 and vegan diet.

After 5 months of our additional treatment the following parameters are found:

CT: tumor 4x5 cm, Lab: S-PSA 11,10 ug/L ; F-PSA 1,40 ug/L ; Index PSA 12,61% .

Patient confirms the important reduction of his health problems.

Conclusion:

Additional treatment with oils Planet of Health No.10, 58, 89, 90 and vegan diet improves the immune system in the patient and causes the regression of the tumor, inflammations and disease symptoms.

The quality of patient's life is improved.

These results give hope to induce the treatments with oils in regular clinical practice after more detailed clinical research.
