Identifying Fasteners

Here is a collection of ads for fasteners from auto parts and accessories catalogs. You'll find most of the fasteners are USA made. Some French made fasteners are toward the end. If you have a 1904 Winton, you can see that your fasteners were the Climax style. If you have a 1908 Sears, your fasteners were the Peerless style. So many antique cars used the Murphy style, and you can see they showed up about 1907. Even though all these fasteners are shown, we don't have them all. Murphys and Climax are in the catalog. Some of the others are available.

Murphy Curtain Fasteners have been around as early as 1907 when they were patented. Here are parts of the Murphy Co. 1909 catalog.

IMPORTANT

In the following section will be found illustrated **THE GENUINE MURPHY CURTAIN FASTENER,** which has embodied in its construction points of superiority over any other curtain fastener made.

It cannot become unfastened by any vibrating action and is guaranteed as a superior article for the purpose intended.

It is made in **cast brass** only, and that it may be distinguished from stamped or drawn brass imitations, the encircled letter (M) is neatly placed on each fastener.

THE MURPHY CURTAIN FASTENER

CAST BRASS

PATENTED MAY 7, 1907

No. 100

SINGLE CURTAIN, FLAT BASE. 7-16 INCH WIDE

No. 101

DOUBLE CURTAIN, FLAT BASE. 7-16 INCH WIDE

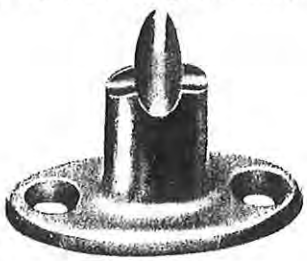
THE MURPHY CURTAIN FASTENER

CAST BRASS

PATENTED MAY 7, 1907

No. 102

TRIPLE CURTAIN, FLAT BASE. 7-16 INCH WIDE



No. 102½

EXTRA HEAVY

TRIPLE CURTAIN, FLAT BASE. ¾ INCH WIDE

THE MURPHY CURTAIN FASTENER

CAST BRASS

PATENTED MAY 7, 1907

No. 103
SINGLE CURTAIN

No. 104
DOUBLE CURTAIN

No. 105
TRIPLE CURTAIN

Nos. 103 and 104 are drilled and countersunk for No. 5 screw. No. 105 is drilled and countersunk for No. 6 screw.

Above fasteners have a concave base $\frac{7}{16}$ inch wide to fit over oval moulding and can be used either to rivet or to screw. (See pages 10 and 11.)

THE MURPHY CURTAIN FASTENER

CAST BRASS

PATENTED MAY 7, 1907

No. 106
SINGLE CURTAIN

No. 107
DOUBLE CURTAIN

No. 108
TRIPLE CURTAIN

Above fasteners have a flat base $\frac{5}{8}$-inch wide, and can be used either to rivet or to screw. (See pages 10 and 11.) Holes drilled and countersunk for No. 6 rivets or screws.

THE MURPHY CURTAIN FASTENER

CAST BRASS

PATENTED MAY 7, 1907

No. 224
SINGLE CURTAIN, FLAT BASE

No. 225
DOUBLE CURTAIN, FLAT BASE

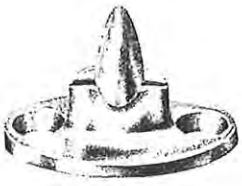
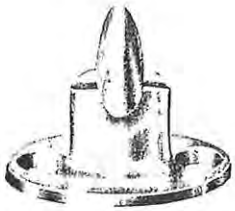
CAST BRASS

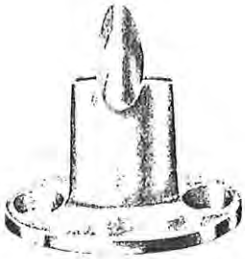
PATENTED MAY 7, 1907



No. 220
SINGLE CURTAIN



No. 221
DOUBLE CURTAIN



No. 222
TRIPLE CURTAIN

No. 223
DOUBLE CURTAIN

Nos. 220, 221, 222 have a flat base ¾-inch wide. No. 223 has a concave base ¾-inch wide.

Above fasteners can be used either to rivet or to screw.

Holes drilled and countersunk for No. 6 rivets or screws.

THE MURPHY CURTAIN FASTENER

PATENTED MAY 7, 1907

EYELETS AND WASHERS

No. 150 Eyelet
with No. 29 Washer

No. 152 Eyelet
with No. 31 Washer

No. 151 Eyelet
with No. 29 Washer

Polished brass or black japanned

Nos. 150 and 151 are stamped brass. No. 152 is cast brass.

Prongs on No. 150 are proper length for ordinary material. No. 151 has long prongs for heavy material.

RIVETS AND BURRS

FOR RIVETING THE MURPHY CURTAIN FASTENER

No. 110

No. 111

No. 113

No. 112

No. 110 rivets can be used with either No. 111 or No. 113 burrs for riveting The Murphy Curtain Fastener to cloth, leather, etc.

No. 111 burr is used with narrow base curtain fasteners.

No. 113 burr is used with wide base curtain fasteners.

No. 112 are solid brass rivets for riveting The Murphy Curtain Fastener to rails, etc.

In the early 1900's many fasteners were made. If you've ever wondered what brands they were, then here are some ads from auto accessory catalogs printed from 1910 to 1915.

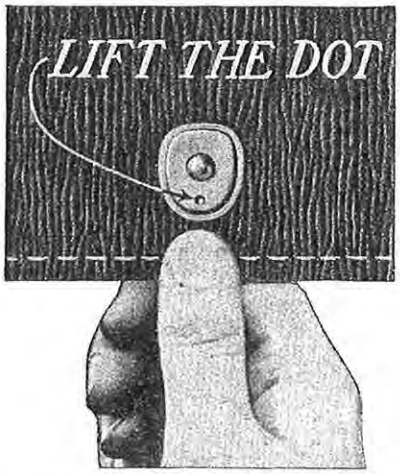
No. 9.	Rivet, double curtain	.90
No. 4.	Rivet, single curtain	.76
No. 7.	Rivet, double curtain	.90

One great difficulty with the cast iron knobs now in general use is that in driving or riveting them to the carriage parts the head breaks off unless great care is taken. It is impossible to break the head of this wrought iron knob in driving or riveting, as the head is made of solid wrought iron and cannot be broken. It is unquestionably the best knob made.

Ever wondered when the Lift The Dot fasteners first came out? Me too! I do know that they were listed in the Minneapolis IRON STORE Company catalog for 1917. So they have been around at least that long.

Minneapolis IRON STORE Company

"DOT" Curtain Fasteners



Lift-the-Dot Fasteners are the latest and best curtain fasteners on the market. They combine the advantages of both old type fasteners and at the same time eliminate their bad features.

Lift-the-Dot Fasteners are so constructed that they are easy to operate (simply lift the Dot to open, and to close, press fastener over stud till you hear it snap) and at the same time are absolutely secure—they will never come open until you lift the Dot. Will last through years of use and last but not least they absolutely will not rattle.

"DOT" Clinch Fasteners

Has clinch springs for fastening to curtain or top material.

No. 295—Single curtain, nickel finish; price, per dozen.....**$1 20**

"DOT" Two-Screw Fasteners

Stud has a base provided with two screw holes for fastening to body or top bows.

No. 248—Single curtain, nickel finish; price, per dozen.....**$1.50**
No. 249—Double curtain, nickel finish; price, per dozen..... **2.00**

Note that the early fasteners only had the dot on them. Newer ones had the Lift The Dot logo on them.

Here are eleven pages from the 1927 C. M. Hoof Company's Automobile Body Builders and Trimmers Supplies Catalog. Although this is beyond the brass era, it is a good reference for identifying fasteners for the vintage and classic car years. The glove fasteners on the last two pages are also called Anzo fasteners, and they have been around since the teens.

The best source I know for the nickel and chrome fasteners is:
Chuck Close – Antique Auto Fasteners & Hardware
811 Ocean Hill Dr. Huntington Beach, CA 92648
Business/Cell 714-553-8111

"LIFT THE DOT" FASTENERS

A FASTENER FOR EVERY FASTENER NEED

"Dot" Fasteners are the standard fasteners used by leading automobile manufacturers and automobile top and body makers throughout the world. In the "Dot" line there is a type of fastener to meet every requirement in automobile work. The types shown here are the standard types most generally used.

The prices here given are for the individual fastener parts only—order by name and number. All illustrations are actual size.

"LIFT THE DOT" FASTENERS

snap together and lock securely on three of their four sides, but release easily by simply lifting on the fourth side, the side with the "Dot."

"Lift the Dot" Fasteners are used almost universally on outomobile curtains, covers, tops, bodies, windshields, door pockets, slip covers, radiator covers, etc.

VELTEX DOT CARPET FASTENERS

Standard Automobile Carpet Fastener

This type of the "Veltex Dot" fastener is especially made for automobile and carriage carpets. It will not bend or break under pressure of stepping on it. Its merits account for the rapid increase in the demand for this fastener—it is the standard automobile carpet fastener.

No. 666—Chicago Fasteners, celluloid covered, in black and colors. Extra, per gross $0.50

Hardened Steel Screw Studs. Per gross 2.00

SNAP FASTENERS

"DURABLE DOT."

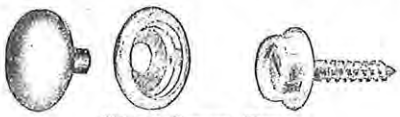
The "Durable Dot" is the most rugged snap fastener of its type and size ever made. It is practically impossible to wear it out. Depending as it does for its holding ability on an extremely heavy wire spring instead of the thin sheet metal used in most snap fasteners, it gives always a firm grip and **retains** this firm grip through years of use.

The button member of the "Durable Dot" is strongly reinforced with steel or brass which prevents the denting.

One of the striking features of the "Durable Dot" is that when applied to cloth or leather in a hand press or a foot press it is able to cut its own way through the material.

Eyelet or Clinch Type.

	Per 100
No. 7050B—24 Line, Black	$2.15
No. 7050N—24 Line, Nickel	2.15



Wood Screw Type.

	Per 100
No. 7057B—24 Line, Black	$2.65
No. 7057N—24 Line, Nickel	2.65

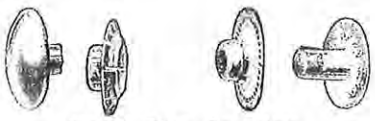
Drive screw can be furnished in place of wood screw at same price.

"ANZO DOT."

The "Anzo Dot" Fastener is a snap fastener of less sturdy design than the "Durable Dot." It is similar in general design to fasteners made by other manufacturers, but it possesses one or two distinct improvements which makes it superior to the ordinary fasteners of its type. The most important of these is that the button will cut its own way through the material to which it is attached, if the material be not too thick.

Screw Type, Complete.

	Per 100
No. 2102B—24 Line, Black	$1.55
No. 2102N—24 Line, Nickel	1.55



Eyelet Type, Complete.

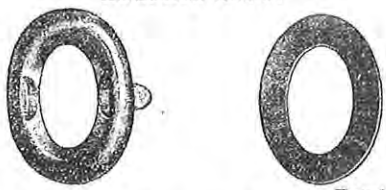
EYELETS ONLY.



Per 1

No. 400—Complete with No. 400A Washer ..... $1.

This 1922 catalog shows the common sense turn-button fasteners with concave sides on the twist part. The 1927 catalog shows the two screw style with a different twist top.

Here the glove fastener is refered to as the "Anzo Dot".

The Lift the Dot still only has the dot on the face. The side curtain it is on is made of the short grain top material so common in that era.

Here are four pages from a 1930's Boyriven Catalog. Most French fasteners were similar but a little different. This company was an industrial supplier for Automobiles, trains, boats and airplanes. They supplied tops, trunks, hardware, fabrics, etc. They are still in business today, but they don't have the older parts. They do carry toppings, wool cloth, modern fasteners and other upholstery supplies.
