Extends Oil Life

DIESEL ENGINE TREATMENT

An **Extreme Pressure Lubricant** specially formulated to protect diesel engines under the most demanding conditions.

INCREASES ENGINE LIFE

Extensive independent testing has been performed on BestLine's lubricants. In one test, a high quality full synthetic brand name oil was tested and the resulting wear was measured. After adding BestLine to create a 15% blend, the oil, with BestLine, was retested and the resulting wear was only 6% of the amount created by the oil without BestLine. Such a significant reduction in wear translates to fewer repairs, less downtime, and longer engine life.

EXTENDS OIL LIFE

- Insures that the oil will properly perform until the next oil change.
- Fleets that test their oil will usually find that BestLine Diesel Engine Treatment will double the life of their oil so that oil change interval may be extended, thereby saving both maintenance and downtime.

DIRECTIONS: Initially, add to oil to between 10% to 15% by volume. At each oil change, add 10% by volume.

Available from:

CLEANS INTERNAL PARTS

The sludge removal and cleaning action of the Diesel Engine Treatment is so strong that the oil may appear extra dirty for the first few oil changes.

IMPROVES PERFORMANCE

- **Increases Fuel Mileage**
With only a 10% blend in a 10W30 non-energy conserving oil, using an American Petroleum Institute accepted test, BestLine's Diesel Engine Treatment provided better fuel economy than that required for a 5W30 oil.
- **Increases Horsepower**
With an engine on a dynamometer, after treating the engine, horsepower increased from 496 hp to 508 hp. That extra power was energy released by BestLine's superior lubrication.

Available in:
16 oz/1/5/55 Gallons
