

# Extends Oil Life

## Patented Premium Synthetic

# ENGINE TREATMENT

### The Ultimate Engine Protection • Compatible with All Types of Oil

#### INCREASES ENGINE LIFE

Extensive independent testing has been performed on BestLine's lubricants. In one test, a high quality full synthetic brand name oil was tested and the resulting wear was measured. After adding BestLine to create a 15% blend, wear was reduced by 94%. Such a significant reduction in wear translates to fewer repairs, less downtime, and longer engine life.

#### EXTENDS OIL LIFE

- Insures that the oil will properly perform until the next oil change.
- Fleets that test their oil generally find that BestLine Engine Treatment significantly extends the life of their oil, allowing oil change intervals to be extended if desired. This results in savings on both maintenance and downtime.

**DIRECTIONS:** Initially, add BestLine Engine Treatment to oil to between 10% and 15% by volume. At each oil change, add 10% by volume.

Available from:

#### CLEANS INTERNAL PARTS

The sludge removal and cleaning action of BestLine Engine Treatment is so strong that the oil may appear extra dirty for the first few oil changes. Until the engine is clean, it may be necessary to change the oil filter more frequently than normal.

#### IMPROVES PERFORMANCE

- **Increases Fuel Mileage:** With only a 10% blend in a 10W30 non-energy conserving oil, using an American Petroleum Institute accepted test, BestLine provided better fuel economy than that required for a 5W30 oil.
- **Increases Horsepower:** With an engine on a dynamometer, after treating the engine with BestLine, horsepower increased from 496 hp to 508 hp. That extra power was energy released by BestLine's superior lubrication.

Available in:  
16 oz / 473 mL
