

BESTLINE®

PREMIUM SYNTHETIC

HD

Reduces Heat & Wear

Patented

POWER TRAIN LUBRICANT

An **Extreme Pressure Lubricant** especially formulated to protect all power train and gear components under the most demanding conditions.

MINIMIZES WEAR

Extensive independent testing has been performed on BestLine's lubricants. In one test, a high-quality full synthetic brand name oil was tested and the resulting wear was measured. After adding BestLine to create a 15% blend, the oil, with BestLine, was retested and the resulting wear was only 6% of the amount created by the oil without BestLine. Such a significant reduction in wear translates to fewer repairs, less downtime, and longer engine life.

IMPROVES PERFORMANCE

The significant reduction in friction results in more energy going to the wheels, thereby improving both efficiency and performance. All components run cooler, and the life of the fluids is maximized.

DIRECTIONS: Generally, add to drivetrain fluids to between 10% and 15% by volume. See label instructions.

TREATS ALL COMPONENTS

- **Automatic and Manual Transmissions:** Permits smoother shifting while maximizing the life of the transmission.
- **Gear Boxes and Transfer Cases:** Improves efficiency and extends the life of all internal components.
- **Differentials:** Run smoother, cooler and with significantly less wear.
- **Power Steering:** Minimizes any noise from the power steering pump while extending the life of all components.
- **Water Pump:** When added to coolant, lubricates the water pump bearings.
- **Hydraulic Systems:** Permits smoother, quieter and cooler operation of all hydraulic systems while maximizing the life of the hydraulic fluid, pumps, and valve systems.
