

**ISA Pune Section**

# **Industrial IoT – The Automation Perspective**

**TITLE**

**Industry 4.0 in Process  
Industries**

**Presented By**

**Avtar Bratch**

**Company Name**

**AUCOTEC AG**

## **Avtar Bratch,**

Sales Director AUCOTEC AG Oldenburger Allee 24, Hannover, Germany.

Educated at Portsmouth University B.Eng (Hons) Electronic & Electrical Engineering

With 20 years of technical sales experience providing engineering solutions within the International arena to a number of different industries sectors.

Currently managing the sales teams for India, SE Asia, Australasia and UK/Ireland regions for AUCOTEC AG.

## **Stefan Wedderkopp,**

Director Application Consulting AUCOTEC AG,  
Oldenburger Allee 24, Hannover, Germany.  
Educated at Fachhochschule Ludwigshafen,  
Diplom, Wirtschaftsinformatik, Unternehmens-  
beratung, Organisation und Logistik.

With 19 years of experience as team leader  
(Presales, Consulting, Sales, IT) with  
International Sales and Presales for Technical  
Software with Enterprise approach.

Currently managing a global team of application  
consultants at AUCOTEC AG.

**COOPERATION  
PLATFORM**

# Why talk about Industry 4.0?

Because everybody is talking about it

You shouldn't have  
no opinion

Industry 4.0 is the booster for industrial  
innovation

## Facts

An initiative of the German government  
First time mentioned at Hanover Fair 2011  
Announcement of the platform at Hanover Fair 2013  
(background: keep production in high wage countries)

## Why 4.0?

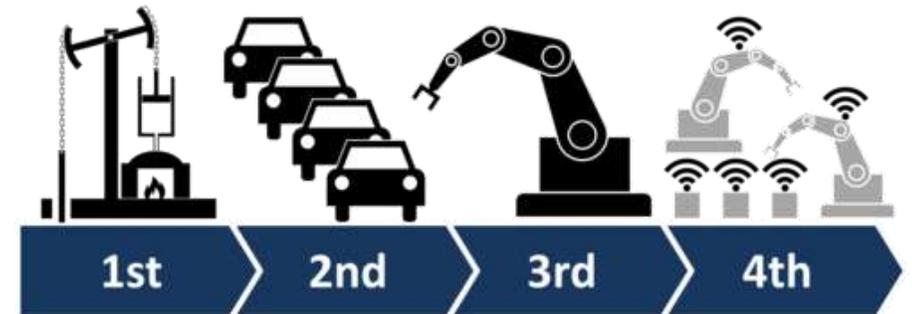

### It's about the 4th industrial revolution

1st was steam power

2nd was assembly line

3rd is automation

4th will be cyber physical systems

## What means Industry 4.0

- It's a Holistic Approach
- It's an Integrated Approach
- It's a Standardised Approach

# Integrated / Standardised Approach

Level 5 - Business Systems

Level 4 - Plant Level (ERP, MRP, and MES)

Level 3 - Operation Unit Level

Level 2 - Machine/Process Automation Level

Level 1 - Controller Level

Level 0 - Sensor/Actuator Level

Engineering Base

PROTOCOL - ISO15926, IEC62424, NAMUR.....

Cyber Security

Cloud Computing – Big Data

# Digitalisation as the Key Factor

Whatever you want to achieve, you need a new quality of data

To analyze, calculate, communicate - data has to be accessible and prepared for interpretation

So far data of production and of the production plant is often only available as (digital) documents

# Digitalisation – an old Story?

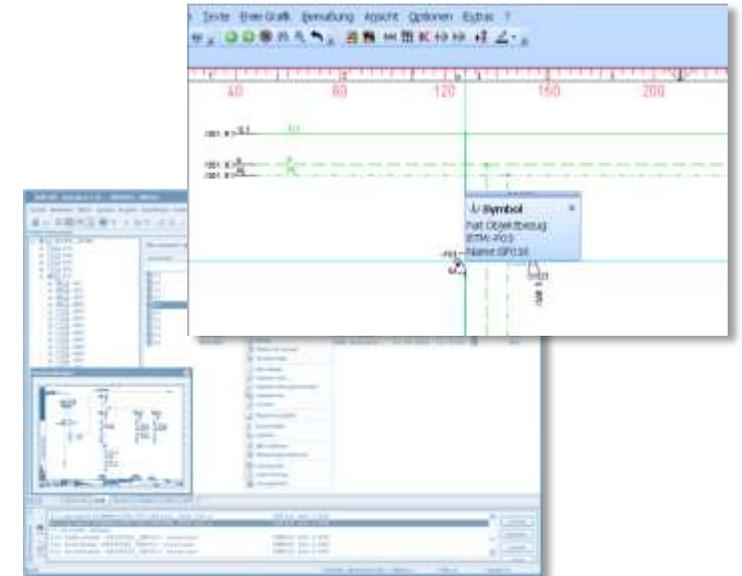

Since the middle of the 1980ies documents are created by software

The results are „digital“

Binary data

printed (analog)

as PDF, DWG, ... (digital)

# “Digitalisation” means more

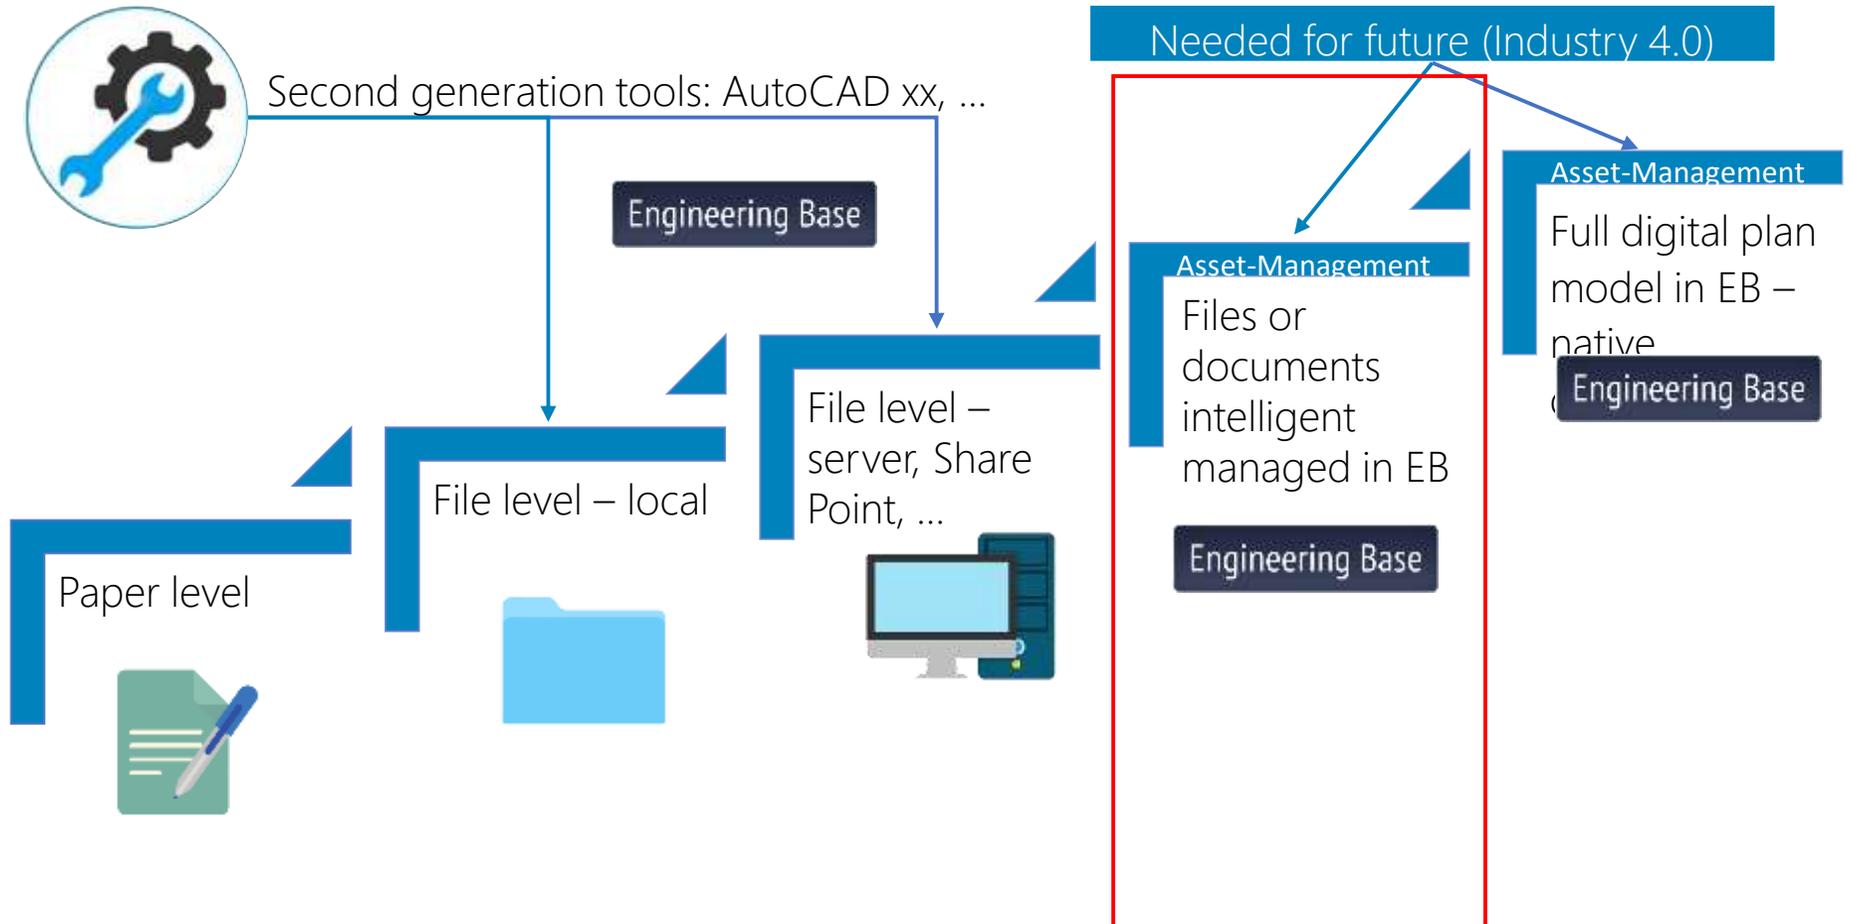

Digitalization today requires intelligent data

Navigation systems do not run on photographs

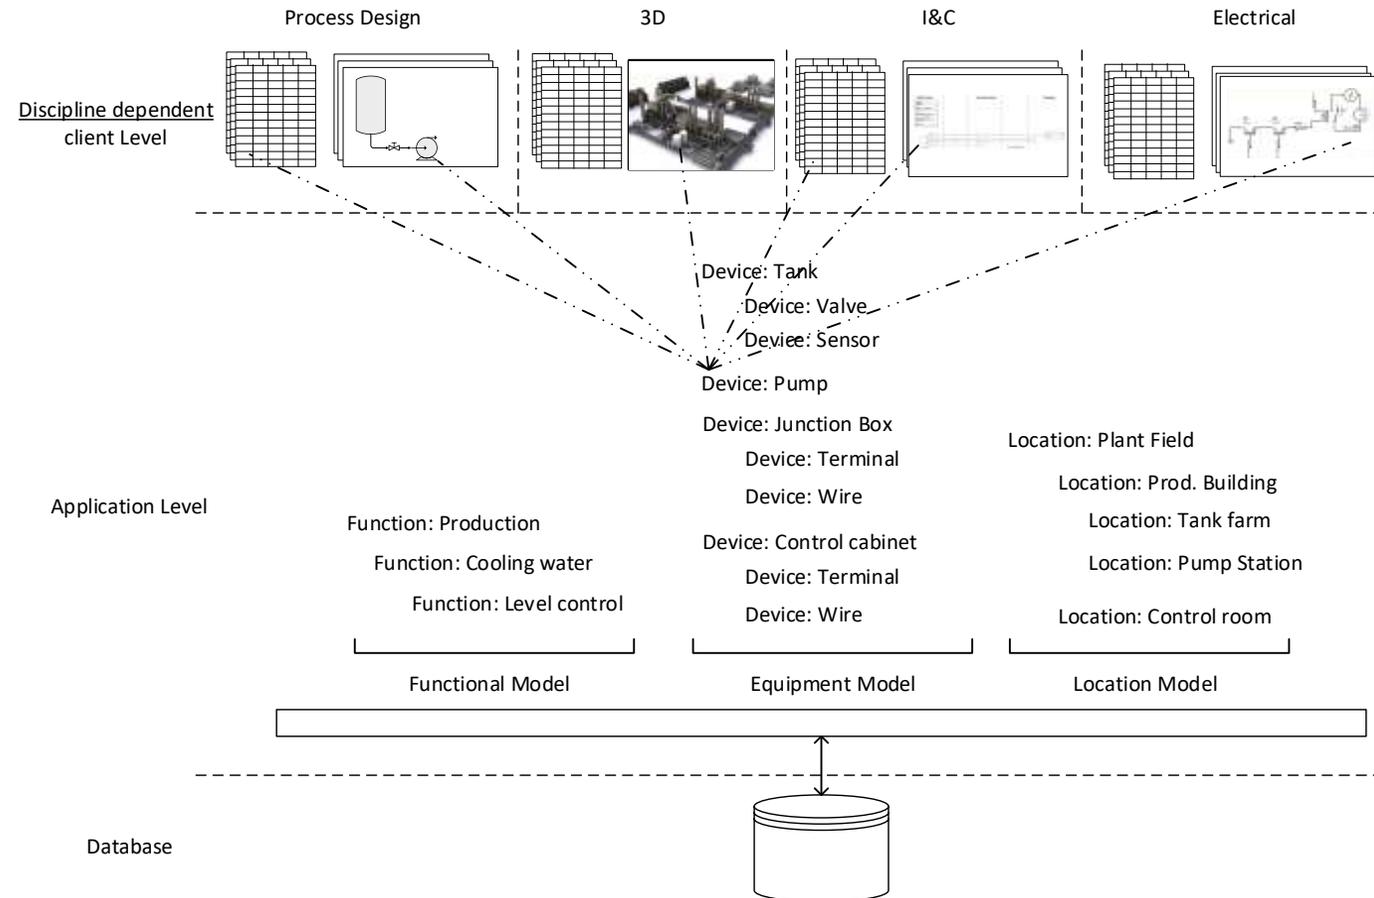

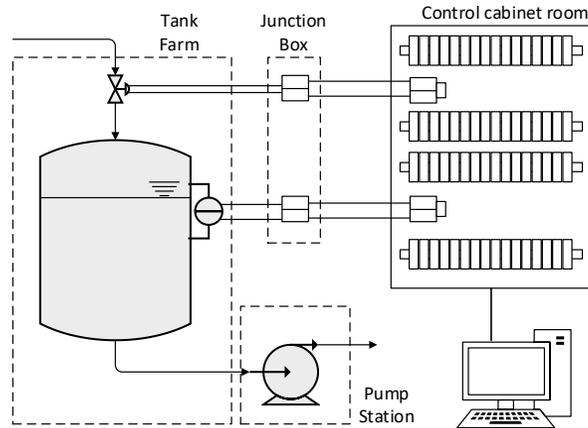

A virtual model of reality is needed – the digital twin

# Digitalisation Level → 5.0 or 6.0

# Digitalisation of Engineering

# Big Data

Transform the vast amount of data to useful information

Engineering and construction projects for huge plants today contain big data to be managed

Thousands of assets have to be specified plus their dependencies, interconnections and automation

During operation of a plant big data produced by the automation system that is of value

A data model as single source is the enabler for later analysis tools (e.g. for predictive maintenance solutions)

# Value of the Digital Twin

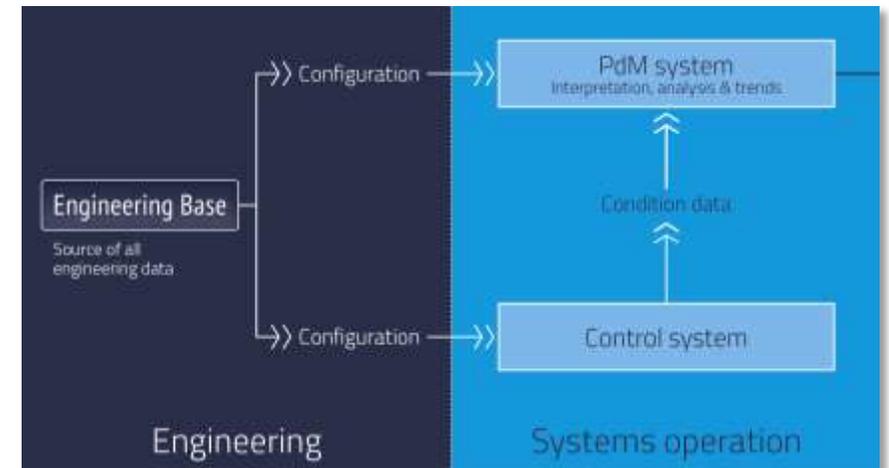

## During engineering and construction

The reliable single source of truth as condition for simultaneous engineering and tracking of changes

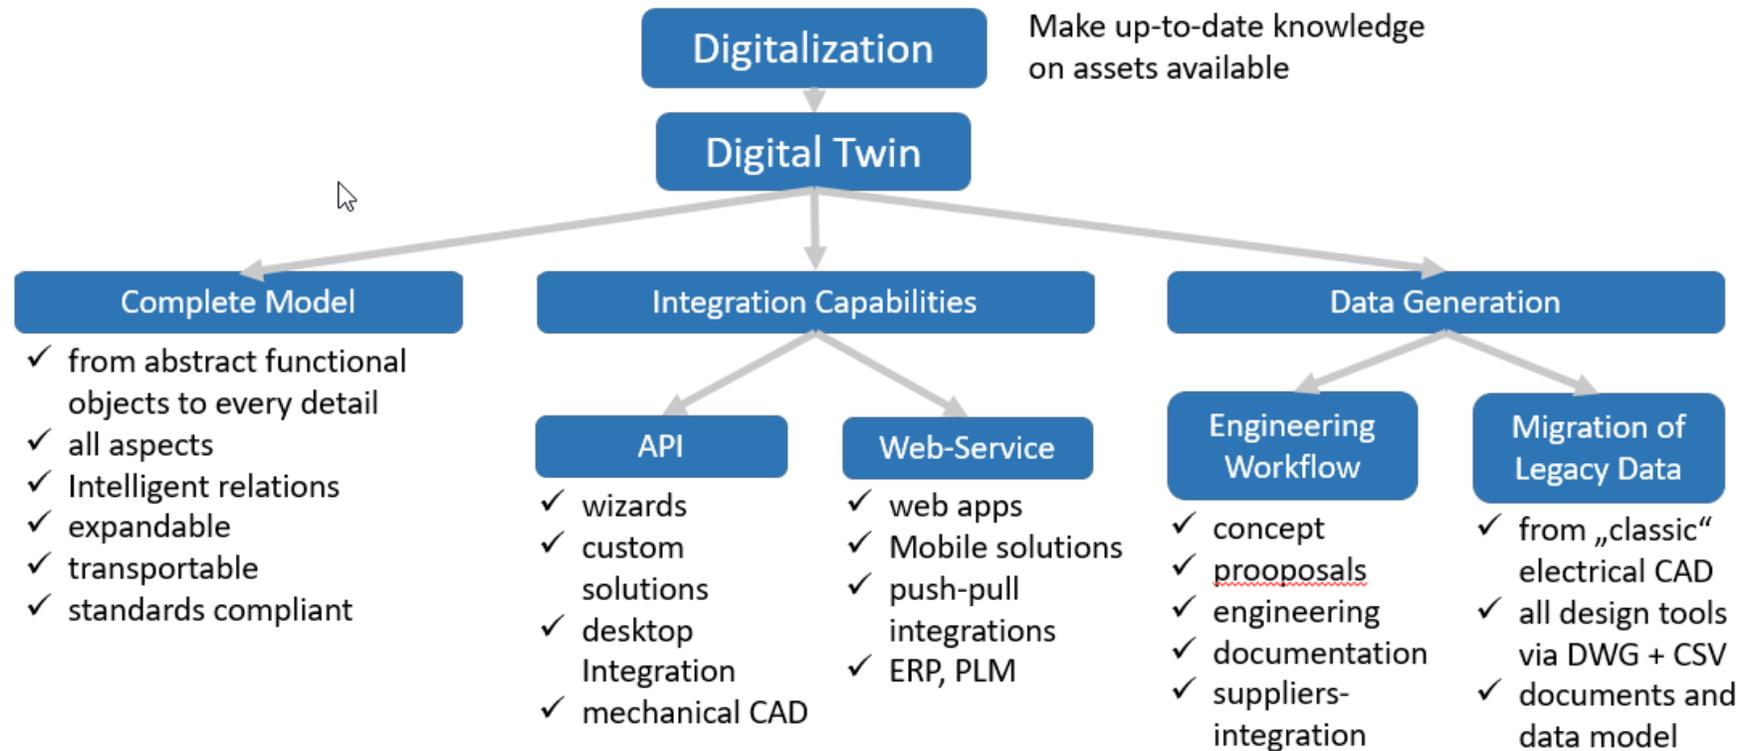

## During plant operation

The “As Built” model is basis for maintenance information

Single source for configuration of DCS and predictive maintenance tool

# Criteria for appropriate Engineering Platform

## AUCOTEC's Role in Industry 4.0

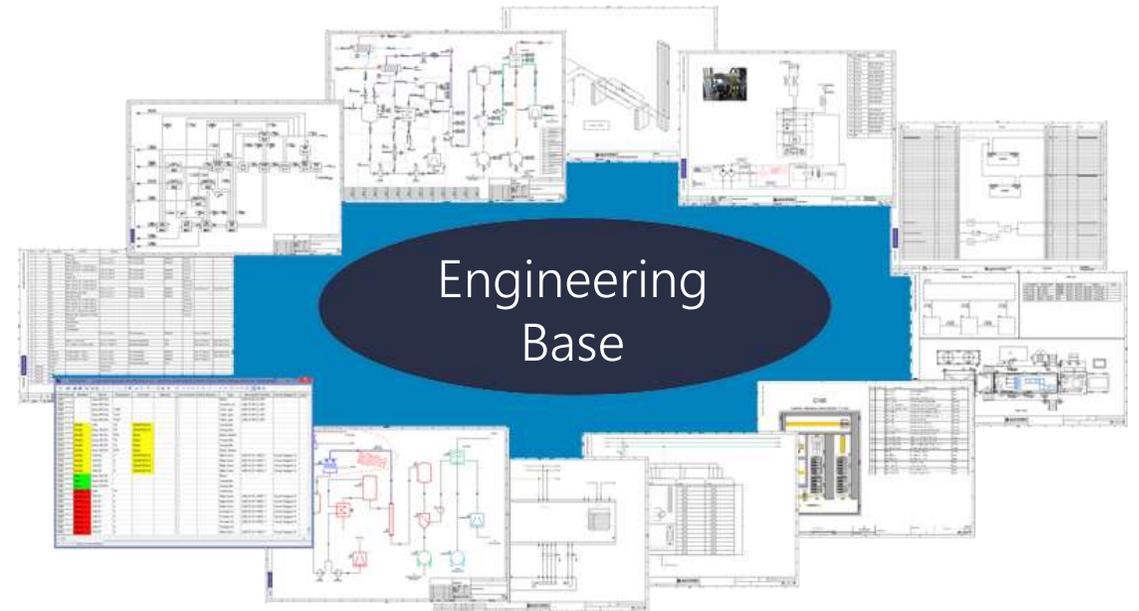

Help companies in their transformation from current state to Ready for Industry 4.0

Provide Engineering Base as cooperative platform to design and maintain the digital twin

Support companies to implement new processes based on that platform with a global consulting network

# Cooperation Platform enables Industry 4.0

Concept design  
RFP  
Engineering  
Supplier - Integration  
Documentation  
Maintenance  
Turnaround
