About the Author

R.K. Antonio is a writer whose work bridges humanity and technology with clarity, empathy, and transformation. Born in Brooklyn to Jamaican immigrants, Antonio began his career as a respiratory therapist before moving into technology as a Microsoft Certified Systems Engineer, full-stack developer, and Scrum Master. These dual paths—healing and hardware—shape his unique lens on what it means to be human in a world increasingly defined by code.

Key Talking Points

- AI is already in your home and workplace — the real question is what do we want to build with it?
- Technology doesn't erase humanity; it magnifies it.
- Humor is a powerful way to disarm fear around AI and invite everyone into the conversation.
- This book isn't about AI replacing people — it's about people reclaiming their power to guide AI.

Sample Excerpt

"AI is predictive pattern recognition — a mirror made out of math, reflecting us back to ourselves in high resolution. What we choose to see in it... is entirely up to us."
