

JAMES LEDBETTER

DIRECTOR OF TECHNOLOGY DESIGN

James brings 28 years of experience in planning, design, construction administration, and implementation of physical security and technology systems. His proven skills have made him one of the premier Security/Technology consultants in the State of Texas.

James is responsible for establishing the designing standards for all low voltage systems on Prestige projects across the state. These systems include the overall design of the local area network structured cabling, local/public sound, fire detection and notification, access control, perimeter intrusion detection, and video surveillance.

Along with establishing and designing standards for projects, James also serves as a consultant for many clients to establish systems' standards mentioned above, namely physical security and technology. The knowledge acquired from both the integrator and engineering sides of the industry, provides James with a unique ability to design cost effective, highly functional, and user-friendly systems.
