

WHAT ARE THE BENEFITS OF CBD OIL?

CBD oil herbal drops are hitting the healthcare industry by storm, gaining in popularity daily due to the number of people using CBD as an alternative to many commercial products and finding results. In addition, many studies are demonstrating how this oil is naturally assisting in the healing process of many health conditions. This oil can be used orally or topically depending on the benefits you are seeking. To consume, we recommend placing the drops right under your tongue.

WHAT IS CBD OIL?

At CBD BioCare our CBD oil is extracted from high-CBD, non-detectable, THC medicinal hemp. Cannabidiol (CBD) is just one of over 100 cannabinoids presently identified in the cannabis plant and is the second most abundant cannabinoid in marijuana after THC. In medicinal hemp, CBD dominates the plant's makeup. CBD interacts with our naturally occurring systems, but it doesn't cause a high. CBD oil is significantly different from hemp seeds or hemp oil you commonly find in grocery stores. Derived only from hemp seeds, hemp seed oil is a great nutritional supplement, containing many vitamins and minerals and other healthy constituents, but it does not contain CBD, which is the star of

our oils and creams. Our product is 100% hemp which means it contains the full spectrum CBD oil with all of the cannabinoids as well as hemp seed oil. Together they are a superior combination. The seed oil is high in omega fatty acids which help our bodies absorb the cannabinoids.

WHAT MAKES CBD BIOCARE'S CBD OIL A BETTER CHOICE?

- Full Spectrum CBD Oil
- Whole Plant Extracted
- Organically Grown in the USA
- Manufactured in the USA and bottled in an FDA food grade facility.
- 3rd party tested for compliance, safety and security 4 x before reaching you.
- Company transparency

HOW MUCH CBD OIL SHOULD YOU TAKE?

This is probably the most common question and perhaps the most difficult to answer. CBD is believed to interact with our own cannabinoid system, which means how we interact with CBD individually depends on our tolerance as well as our immunity. Therefore, one dose may work for one person and not the other. Surprisingly, it has nothing to do with weight, but once again our own system. This is why our physician recommends starting low and slow until you achieve the results you are looking for with the oil. We have people taking several drops to the whole dropper to receive the results they are looking for.

HOW DOES CBD WORK AS A TOPICAL ON THE SKIN?

The endocannabinoid system consists of many cannabinoid receptors, and a large portion of these are found in the skin. Molecules in cannabis such as THC and CBD may interact with this system to create positive effects. One study in the British Journal of Pharmacology found that phytocannabinoids, particularly CBD may control cell proliferation and differentiation. For further explanation please look into this study further. We are not permitted to make claims in regard to treatments. For any medical treatment you should consult a healthcare professional.
