

Lighting a Candle

1. **Extend lighting taper 1 inch out from candle lighter BEFORE lighting.**

2. **Handle the lighter carefully to avoid pieces of the taper or wick from breaking off.**

Extinguishing a Candle

1. **Always use a candle extinguisher to put out the candle flame. Never blow out the candle. To extinguish, gently place extinguisher over candle follower, being very careful not to touch either the wick or follower. The follower is resting on both liquid and soft wax, tilting it or compressing it with the extinguisher may cause the candle to malfunction the next time it is used.**

2. **After extinguishing candles extinguish taper flame by retracting into candle lighter tube & IMMEDIATELY EXTEND TAPER OUT from tube to avoid wax build-up and jamming.**
