

# MORE ON U. OF MISSOURI PERFIN

Following up his report on the new University of Missouri Perfin type (July-August Bulletin), Norman Touchette of St. Louis has sent the editor a copy of the response he received from his inquiry to the university. The pertinent paragraphs read as follows:

"Our first stamp perforator was purchased June 1, 1922, from the B. F. Cummins Co. Model #877, operated by hand and punched only

10 stamps at a time. This machine was used till Jan. 1977, and is still in our possession.

"Our second perforator was purchased from Cummins Allison Corp. Maryland Heights, MO, Model #386, Wide head, electric, with foot trip switch, it punches 25 stamps at a time or 100 if you fold the sheet."

Our thanks to Norm for developing this information.
