

ProStar Training January 2018

We are very excited to share with you some new offerings designed to help you become more efficient and skilled with the most popular software packages being used today.

We have a long history in the Tulsa area (formerly N.E.T.) and are excited to continue with Tulsa as our base of operations.

Training has changed over the years. Traditional class room environments have become something of the past. Too restrictive for the average student and entirely too expensive. We operate on a new model that is really taking off not only here in Tulsa but around the country.

Our classes are offered online live with an instructor. You can take a class from your office or home. You can see and hear the instructor from any PC or mobile device. To learn more about our Live by Wire just [click here](#).

We also offer onsite training, where we bring the class to you. All it takes is a

conference room or training space and we can give custom tailored training to your staff.

We have some great offerings below but as always feel free to browse our site and let us know if you have questions on any of our courses.

To visit our website just click here

Microsoft SharePoint Training

We are excited to offer SharePoint courses designed for Users, Owners and Advanced Owners needing Workflow development skills.

Please click here to learn more

Microsoft Excel Training

Excel is the most popular of the office programs. We are currently offering several Excel courses including a new Dashboard and Advanced PivotTable class.

Please click here to learn more

Project Training

We offer courses in the popular Microsoft Project software and two outstanding workshops in Project Management.

Please click here to learn more

Google G Suite Training

Google Cloud G Suite is becoming a very popular alternative to other systems, especially for small businesses. We offer courses for the users and the admins.
