

## New Product Development: Colour Coded Clamp

HARD WEARING COLOUR CODED CLAMPS BY ACL

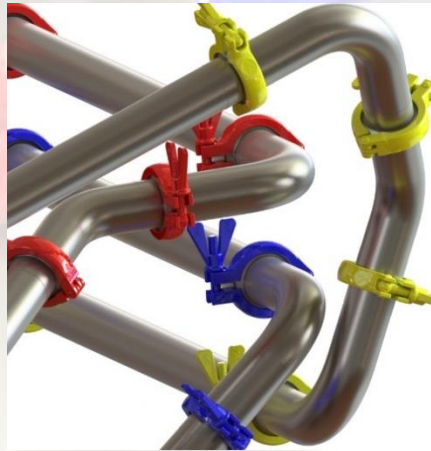

### New Colour Coded Clamps

At Advanced Couplings we dedicate ourselves to continuous improvement of our products and processes. We are actively involved in research & development of new ideas and products to bring to market. This is driven both by Advanced Couplings & customer specific requirements – we welcome feedback & suggestions for any existing & new product ideas you may have.

The attached coated clamp is the result of industry led requirements and also what we believe to be a useful addition to process and validation engineers for line identification.

#### Product outline:

The Colour Coded Clamp is coated with an innovative thin layer of ceramic material suspended in a resin binder. The film is very hard and durable when compared to coatings of a similar nature. It is available for application to all sizes & styles of our clamp range.

#### Advantages:

- Immediate & correct identification of individual or multiple lines within short runs or whole facilities
- Most colours are available
- FDA compliant
- Thin film – 8 to 12 microns
- Resistance to acids and solvents (1% NaOH over 1 hour having no effect)
- Excellent impact resistance
- Anti-galling qualities
