

PROCESS DEPLOYMENT CARTS

NMS Bio-Production offers specialized equipment used in the organization of clean room operations. Designs can be easily created to make your unique process more efficient, safer and better organized. Let NMS Process Deployment Carts take your clean room operations to the next level.

Each product is designed with cleaning and ease of use in mind. The lack of metals in construction eliminates pitting, rouging, or rusting that's typically seen in more traditional clean room equipment. Chemically-resistant PP and secure crevice-free welding provide the solution your team can use with confidence.

***Corrosion
free***

***Fully specialized
design for your unique
manufacturing situation***

***Class VI, TSE/BSE
compliant materials***

Every clean room is unique—with each bioprocess employing different techniques for racking filters, positioning pumps and staging single-use items—and NMS Bio-Production can provide solutions configured to your precise specifications.
