# GLOVE PROTECTION GUIDELINES

## Facts and Tips about Gloves:

- Gloves protect your hands from the following workplace hand injuries: sharp objects, abrasive surfaces, moving components, wet environments, chemicals, blood-borne pathogens and viruses.
- You must follow a safe procedure for removing gloves so soil, chemicals or viruses do not come into contact with your hands. Remove one glove from top to bottom with the other gloved hand. Then, tuck the first glove into the other gloved hand and peel off the second glove from the inside.
- The glove cuff style is an important consideration based on the protection needed. Some cuffs will allow the glove to be removed quickly or allow ventilation.
- There are several standards and ratings for cut-resistant and coated gloves (i.e. EN, ANSI, ASTM, etc.). Compare similar standards when choosing gloves because ratings can be determined based on different testing methods.
- If you have an allergy to latex or rubber, look for gloves that contain no latex such as vinyl or nitrile.

## Size and Fit Matter:

Size and fit are very important to properly protect your hands. Poorly fitted gloves will not be worn and increase the chance for hand injuries.  
 Too small: make hands fatigue while providing less dexterity and decrease productivity  
 Too big: more likely to get caught in moving components and not have proper dexterity  
 Measure your dominant hand with a tape measure around the palm and knuckles.  
 Here are some general guidelines for men's sizes.

7.5 – 8" – Small      10.5 – 11" – X-Large  
 8.5 – 9" – Medium      11.5 – 12" – XX-Large  
 9.5 – 10" – Large

General guidelines for women's sizes.

6" – X-Small      7.5" – Large  
 6.5" – Small      8" – X-Large  
 7" – Medium

## Questions to Consider When Buying Gloves:

- In which task or application will you be wearing gloves for protection?
- What types of gloves do you use? Why?
- What types of hand injuries happen in your work area?
- What do you like or dislike about your gloves?
- If you can change one thing about your gloves, what would it be?
- What are the costs of the gloves you have purchased recently?

## Gloves by Application:

- **There is no one glove that will fit each job or situation. Assess the job and protection needed to purchase the right glove.**  
 Below is a chart that shows the types of gloves commonly found in various applications.

#### European Directives for Personal Protective Equipment

European Standard EN388 established the criteria necessary for rating all PPE items. Many of our hand protection offerings meet these standards – reflected with the CE logo – and have a 4-digit performance rating that measures abrasion, cut, tear and puncture resistance (ACTP).

A glove's overall performance score is indicated by four numbers that represent the four test criteria. The higher the number, the better the performance. Manufacturers may use an X to indicate not tested.

	Criteria	Rating
<b>A</b>	<b>A</b> brasion Resistance	<b>0-4</b>
<b>C</b>	<b>C</b> ut Resistance	<b>0-5</b>
<b>T</b>	<b>T</b> ear Resistance	<b>0-4</b>

# PROTECT YOUR EYES!

**Personal protective eyewear, such as goggles, safety glasses and faceshields, must be used in a workplace where an eye hazard exists.**

Each day approximately 2,000 U.S. workers sustain an eye injury on the job that requires medical treatment. A third of the injuries are treated in ERs and more than 100 result in a day or more of lost work. The majority of injuries occur because of small particles or objects striking or abrading the eye.

**Having the right protective eyewear is critical in preventing eye-related injuries.**

Before choosing eye protection, identify the hazards of your workplace. Then, the choice can be made between safety glasses, goggles or a combination with a faceshield as secondary protection.

Eye protection should be fit to the worker or adjustable to provide for appropriate coverage. The worker's personal vision should be considered, with safety glasses large enough to allow the user to wear their own glasses underneath.

[www.cdc.gov/niosh/topics/eye](http://www.cdc.gov/niosh/topics/eye)

## Eyewear Types

**Safety Glasses** protect against general impact; however, speed of impact must be considered. The higher the velocity, the more likely the safety glasses could be dislodged. In this case, goggles or a faceshield may be a better choice. **See pages 322-326.**

**Goggles** are available in direct and indirect vented styles. **See pages 326-327.**

Direct vented goggles allow airflow, but are only approved for protection against particulates. Use for jobs such as grinding or cutting where dust is an issue.

Indirect vented goggles are for protection against vapors, chemicals, liquids and dust.

**Full Faceshields** are the best option for workers exposed to flying particles or chemical splashes. Use in conjunction with safety glasses or goggles to protect against secondary hazards. **See page 328.**

## Eyewear Features

**UV Protection**—for workers exposed to ultraviolet radiation, such as outdoor workers and welders.

**Hard-Coated**—for applications where lens scratching is an issue.

**Anti-Fog/Anti-Mist**—for workers who are exposed to extreme temperatures or warm humid environments.

**Clear Lenses**—for indoor or outdoor applications in below-normal light conditions.

**Gray or Brown Lenses**—for outdoor use where above-average light is available.

**Amber Lenses**—for applications where light is below normal or enhanced contrast is needed.
