

Coatzacoalcos II – LNG Terminal

What is our project?

Coatzacoalcos II is a **Liquefied Natural Gas (LNG) terminal development project** strategically located in the port of Veracruz, Mexico—a key hub for gas exports. The project was conceived into a **three-phase development** to maximize capacity and meet regional industrial and storage demands, expecting to have an installed capacity of 46 mcf/day.

Expansions per phase

Highlights of our project

- Proximity to US guarantees the most reliable and cost effective supply
- Strategically placed to serve the European market
- Potential reconversion of asset to export green hydrogen or ammonia
- High support of governmental entities

Our approach to business

- 1 CapEx Efficiency**
Due to our phased approach, we optimize the capital strategy to offer flexibility and significant growth to investors.
- 2 Regional impact**
The terminal will play a central role in supporting Mexico's energy strategy, positioning it as an asset for LNG international markets.
- 3 Seasoned professionals**
Our partnership is compounded by experienced professionals to ensure effective execution and operational success.
