

SPECIALIZING IN ANESTHESIA SERVICE AND REPAIRS

Dental Machine Service

At VASS, we service and maintain the Dentalaire dental machine. The annual recommended service of the Ultimate and Prestige can be done by your staff and this link, <https://www.dentalaireproducts.com/oil-change-on-compressor/>, will walk you through the process. However, if you would prefer VASS to service the machine, we will change the oil as shown in the video as well as perform the following,

- Change compressor tank o-rings and filters
- Confirm that the Compressor pressure is set properly
- Assess tubing for wear
- Assess all hand pieces for proper function as well as confirm that the High and Low speed handpiece are set at the proper speed
- Confirm water bottle(s) gaskets and filters are in proper working order
- Make additional repairs as needed
- All new dental units are supplied with the Dentapure antibacterial system which should be changed annually. We also recommend this system be installed on all older units as well. Please ask for a quote if interested.

Many of our vans carry a full complement of service parts for the Dental Aire machines, but we recommend discussing any concerns that you may have with your machine before our representative arrives on site to avoid additional shipping of parts and return visits for installation repairs.
