Audio Auxiliary: Audio Theory and Basic Sound Reinforcement Equipment Course

Welcome to our Audio Auxiliary course, a comprehensive program designed to equip you with a solid understanding of audio theory and practical skills in handling basic sound reinforcement equipment.

Course Overview

This 16-hour course is divided into several key areas:

Signal Flow: Learn about the path that audio signals take from source to output, and how to manage and control the flow effectively.

Basic Equipment: Gain hands-on experience with essential audio equipment such as microphones, DI's, mixers, speakers, power amplifiers, equalizers, cables, and connectors. Understand their functions and learn how to use them correctly.

Equipment Connection and Powering Procedures: Master the correct procedures for connecting your equipment and powering up and down, ensuring the safety and longevity of your gear.

Basic Audio Theory: Delve into the science of sound. Understand sound waves, frequencies, and the audio spectrum, and how these elements interact to create sound experiences.

This course is perfect for anyone interested in audio production, whether you're a beginner looking to get started stagehand seeking to skill up.

Join us on this exciting journey into the world of audio theory and sound reinforcement equipment. Let's turn the volume up on your audio skills!

Sign up now and start your audio mastery journey today!
