

# Schoenitz Dental Laboratory – Cross Infection

## Control Policy.

Laboratory Name: Schoenitz Dental Laboratory.

Laboratory Address: 40 Metro Centre, Dwight Road, Watford, WD18 9SB.

Practice Name:

Practice Address:

Contact Name:

This laboratory's infection control procedure is as follows:

Our team at Schoenitz clean their dental appliances in accordance with recognised dental laboratory practice. These cleaning processes are believed to reduce the level of micro organism contamination to a level that should not be hazardous, i.e. the cleaning processes are acting as decontamination and disinfection. As far as the laboratory is aware, there have been no reports of cross-infection arising from the use of appliances cleaned in this way.

Our team's disinfection process is to rinse the appliance under running water, immerse the appliance in Perform Disinfectant for 10 minutes then rinse under running water again.

All manufactured products are steam cleaned before packing.
