

Since 1911, The Tabernacle has been a welcome site along Luckie Street. Originally designed by architect Ruben Harrison Hunt, The Tabernacle is a beloved landmark and has lived the life of a church and now music and entertainment venue.

After years of exposure, the iconic columns were in need of refresh. Envirological Engineering was charged with tending to the lead-based paint stabilization process.

Rolyn Company followed with a fresh coat of white paint.

The work was completed February 2020, in time for a new season.
