

STRONG SOLAR. MADE FOR FLORIDA.

IronRidge solar mounting was first to formally receive Florida Product Approval from the Florida Building Commission for compliance with the state building code. That's because we make strength the key focus in every component we design.

Florida's rigorous evaluation process includes testing for resistance to high-velocity hurricane zones, with ongoing quality assurance audits, and our approval covers all residential systems across the entire state, with up to 100 PSF of wind pressure.

Not only do IronRidge products stand up to the most extreme weather conditions, they also look great while doing it—for the lifetime of your solar array.

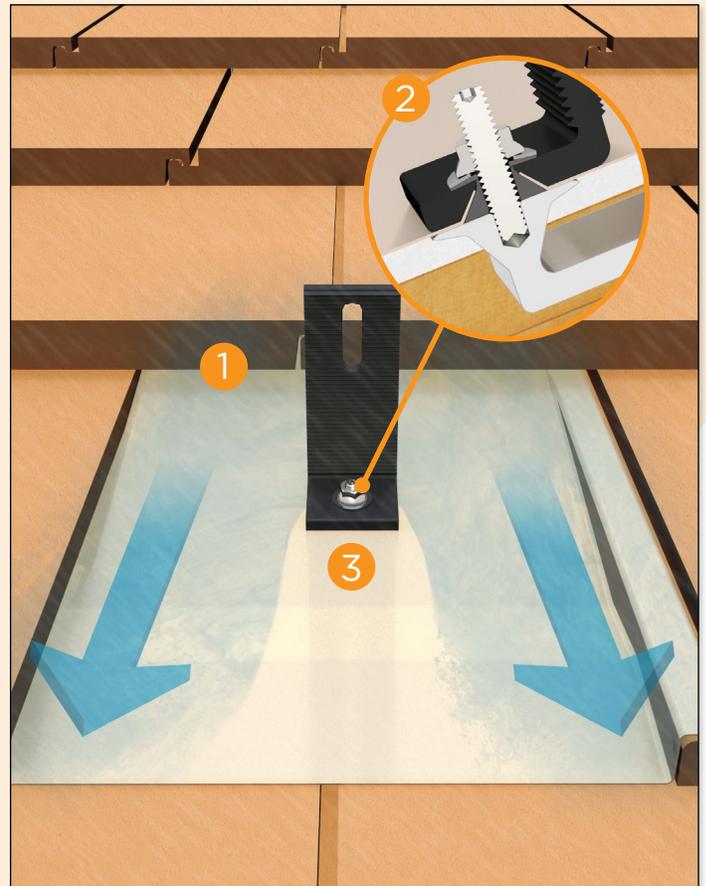

ALWAYS RESPECT THE ROOF.

Quality solar installers care enough to select the very best products for their customers' homes. Whether mounted on a shingle or tile roof, IronRidge has a product that is tested and certified to protect your home and support the solar racking system attached to it. Every system is backed by our 25-year warranty.

FLASHFOOT2

KNOCKOUT TILE

- 1** Integrated flashing system works with the water-shedding design of composition shingle roofs.
- 2** Elevated seal keeps water runoff far away from the opening for the attachment bolt.
- 3** Encapsulated design ensures protection against wind-driven rain and extreme storm conditions.

- 1** Integrated flashing system works with the water-shedding design of tile roofs—S, W, and flat.
- 2** Form-fitted seal keeps down and out with its unique compression seal technology.
- 3** Centered loading penetrates the roof half as much as other tile roof mounting products.
