Customer Instructions

-----  
Fault reading SCR inducement.  
DEF system

Work Carried Out

-----  
Complaint of machine displaying scr inducement. Found machine to randomly cut out. it is purely a JCB engine fitted & all other components are made by the machine manufacturer. When the machine cuts out p1509 is displayed. Linked to throttle sensor with a can error, & then followed up by u010e-08 & u010e-87. Tested both the ecm & dcu. giving readings indicating connections & both online. Removed & inspected both ecm plugs & dcu plug all ok all dry & no issues found. Tested lives & earths all ok. Tested fuel delivery, approx. 1.3 litres delivered. Unable to trace errors further back due to there being no throttle on the unit. Engine was also run up to temp & scr regen attempted. Unable to do so. Customer liaised with equipment manufacturer. They are expecting phone call back from them, but no time scale could be given. As over allocated time, customer agreed that we should leave site until more information can be supplied
