### SWIMMING POOL

Our pools are open year-round (except for the M Mar Sea Apartment, available from June 15th to September 15th). From November to Easter, heated pools can be booked for an additional daily fee (exclusively at Manuela, Lola, Andrea, and Maria del Mar).

According to legislation, our swimming pool does not have a lifeguard. The rules of use are attached to the contract.

Regular measurements of a swimming pool are essential to ensure that the water remains clean, safe and balanced. Below are the key measurements that are carried out at least twice a week:

- PH: Measures the acidity or alkalinity of the water. The ideal values are between 7.2 and 7.6.
- Free chlorine: Ensures that the water is disinfected. The ideal values are between 1 and 3 ppm (parts per million).

- Water level: It is necessary for the correct operation of the filtering system.
- Water temperature: It influences the consumption of chemicals and the proliferation of microorganisms.
