Please PM us a graphic for a more precise estimate.

Metal dust covers: \$10

GRAPHICS:

Formats:

We can work with images in JPG, JPEG, PNG or PLT files. The better the image quality, the more likely we will be able to work with it. All graphics will be converted to black and white so blurry images or images with poor contrasting colors and shading likely won't translate.

Laser Colors: Lasers do not engrave in color even though we can shade metals to silvers, gold and even black depending on the metal.

Size:

Be realistic, a wedding portrait engraved on an area the size of a stamp will not render well. Rule of thumb is, find that graphic on google, shrink it down on your screen to the size it will be, if it is hard to recognize there, it will be hard to recognize on the finished product.
