

Embankment protection with Elastocoast® at the port of Gennevilliers (France)

Case Study

Along the waterside of the river Seine in the port of Gennevilliers Elastocoast® was used for the renovation of an embankment protection. Thanks to its open-cell structure Elastocoast® ensures excellent erosion stability.

Task: Embankment protection and renovation

Bonding agent: Elastocoast® 6551/103; approx. 2.6 t

Year of construction: 2011

Realization: S.N.V. Maritime

Competent authority: Agentur Gennevilliers

Planning: S.N.V. Maritime

Area: 400 m²

Construction: Geotextile
