

Renovation of the harbor slope using Elastocoast® in Cuxhaven (Germany)

Case Study

In order to secure the inner slope of the harbor in Cuxhaven the local authority “Landesbetrieb für Wasserwirtschaft, Küsten- und Naturschutz” (NLWKN) applied Elastocoast®. With this solution, the inaccessible revetment could be implemented without heavy equipment.

Task: Renovation of the inner harbor slope

Bonding agent: Elastocoast® 6551/103; approx. 6.6 t

Year of construction: 2011

Realization: NLWKN

Competent authority: NLWKN

Planning: NLWKN

Area: 350 m²

Construction: Granite gravel (20/40 mm)
