

Data Story:

Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

Description:

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Data Sources: Centers for Disease Control and Prevention

URL: <http://ridatahub.org/datastories/introduction-to-the-high-school-yrbs>

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Introduction

The Youth Risk Behavior Surveillance System (YRBSS) monitors health-risk behaviors such as tobacco use, alcohol and drug use, and sexual behaviors, as well as the prevalence of obesity and asthma among youth and young adults.

Conducted every two years by the Center for Disease Control (CDC) and state and local education and health agencies, the YRBS is a school-based survey given to a representative sample of students in grades 9-12.

Data Story Page Introduction to the High School YRBS: Page 1 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Introduction

The YRBSS was designed to:

- Assess the prevalence and trends of health risk behaviors among youth.
- Examine how often health risk behaviors coexist.
- Provide comparable national, state, and local data.
- Provide comparable data among subpopulations of young people (gender, race/ethnicity, etc.)
- Evaluate the impact of school and community interventions at the national, state, and local levels.
- Monitor progress towards Health People 2010 objectives.

Many of the questions on the YRBS are similar to those asked on the Rhode Island Department of Education's SurveyWorks! surveys. YRBS data available in the RI DataHUB helps put the prevalence of health risk behaviors among Rhode Island high school students in a regional and national context, while SALT and SurveyWorks! data allow you to focus on Rhode Island schools and students.

Data Story Page Introduction to the High School YRBS: Page 2 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Introduction

There are six categories of health risk behaviors monitored by the YRBSS:

1. Behaviors that contribute to unintentional injuries and violence
2. Tobacco use
3. Alcohol and other drug use
4. Sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases
5. Physical inactivity
6. Unhealthy dietary behaviors.

Throughout the rest of this story, we'll guide you through the indicators available and explore some of the interesting trends in health risk behaviors over the past decade.

Data Story Page Introduction to the High School YRBS: Page 3 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Behaviors that Contribute to Unintentional Injuries and Violence

The following indicators are available on the DataHUB in the category "Behaviors that Contribute to Unintentional Injuries and Violence":

- **Rarely or never wore a seat belt** when riding in a car driven by someone else.
- **Rode with a driver who had been drinking alcohol** in a car or other vehicle 1 or more times during the past 30 days.
- **Carried a weapon** a gun, knife, or club on at least 1 day during the past 30 days.
- **In a physical fight** 1 or more times during the past 12 months.
- **Did not go to school because they felt unsafe at school or on their way to or from school** on at least 1 day during the past 30 days.
- **Seriously considered attempting suicide** during the past 12 months.
- **Attempted suicide** 1 or more times during the past 12 months.

On the next page, you'll be able to examine these indicators by state and over time.

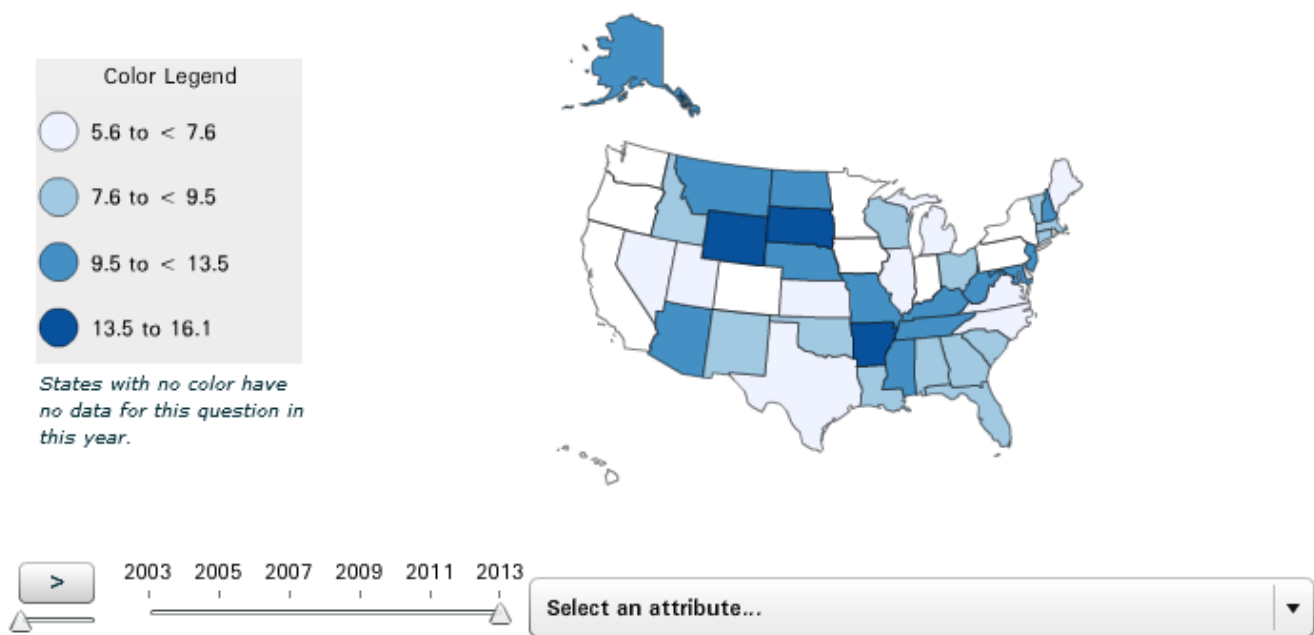

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Behaviors that Contribute to Unintentional Injuries and Violence

Map of % Rarely or Never Wore a Seat Belt, 2013

In contrast to previous years, Southern states had the highest rates of students riding with drivers who had been drinking in 2009, 2011 and 2013.

Above is a map of the United States. As you can see in the color legend on the left side of the data graphic, states are colored in based on the percentage of students who reported that they rode with a driver who had been drinking alcohol in a car or other vehicle at least one time in the past month. States with no color did not participate or did not have quality data that year. Use the drop-down menu to change the indicator that colors that map to another behavior that contributes to unintentional injuries and violence.

Note: the CDC provides a history of participation in the YRBS by state: [YRBS State Participation History](#)

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Tobacco Use

The following YRBS indicators are available on the DataHUB in the category "Tobacco Use":

- **Lifetime cigarette use** - Ever tried smoking, even one or two puffs.
- **Current cigarette use** - Smoked cigarettes on at least 1 day during the past 30 days.
- **Current smokeless tobacco use** - Used chewing tobacco, snuff, or dip on at least 1 day during the past 30 days.

On the following page, you'll be able to view these indicators in a bar chart.

Data Story Page Introduction to the High School YRBS: Page 6 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Tobacco Use

Rhode Island has among the lowest teen smoking rates in the country.

This bar chart displays the percentage of high school students in each state who reported that they had smoked cigarettes on at least 1 day during the past 30 days. Each bar represents a U.S. state or Washington D.C. The bars are sorted alphabetically by each state's abbreviation. Rhode Island is the **green bar**. An estimated 1 in 5 (19.3%) Rhode Island students smoked in the month before the 2003 survey. Using the time slider, you can see the estimate drops to just 8% in 2013.

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Alcohol and Other Drug Use

The following YRBS indicators are available on the DataHUB in the category "Alcohol and Other Drug Use":

- **Lifetime alcohol use** - Had at least 1 drink of alcohol on at least 1 day during their life.
- **Current alcohol use** - Had at least 1 drink of alcohol on at least 1 day during the past 30 days.
- **Episodic heavy drinking** - Had 5 or more drinks of alcohol in a row within a couple hours on at least 1 day during the past 30 days.
- **Lifetime marijuana use** - Used marijuana 1 or more times during their life.
- **Lifetime cocaine use** - Used any form of cocaine, including powder, crack, or freebase 1 or more times during their life.
- **Lifetime methamphetamine use** - Used methamphetamines [also called speed, crystal, crank, or ice] 1 or more times during their life.
- **Lifetime inhalant use** - Sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high one or more times during their life.
- **Offered, sold, or given an illegal drug by someone on school property** during the past 12 months.

On the next page, you'll be able to examine any of these indicators for New York and New England states.

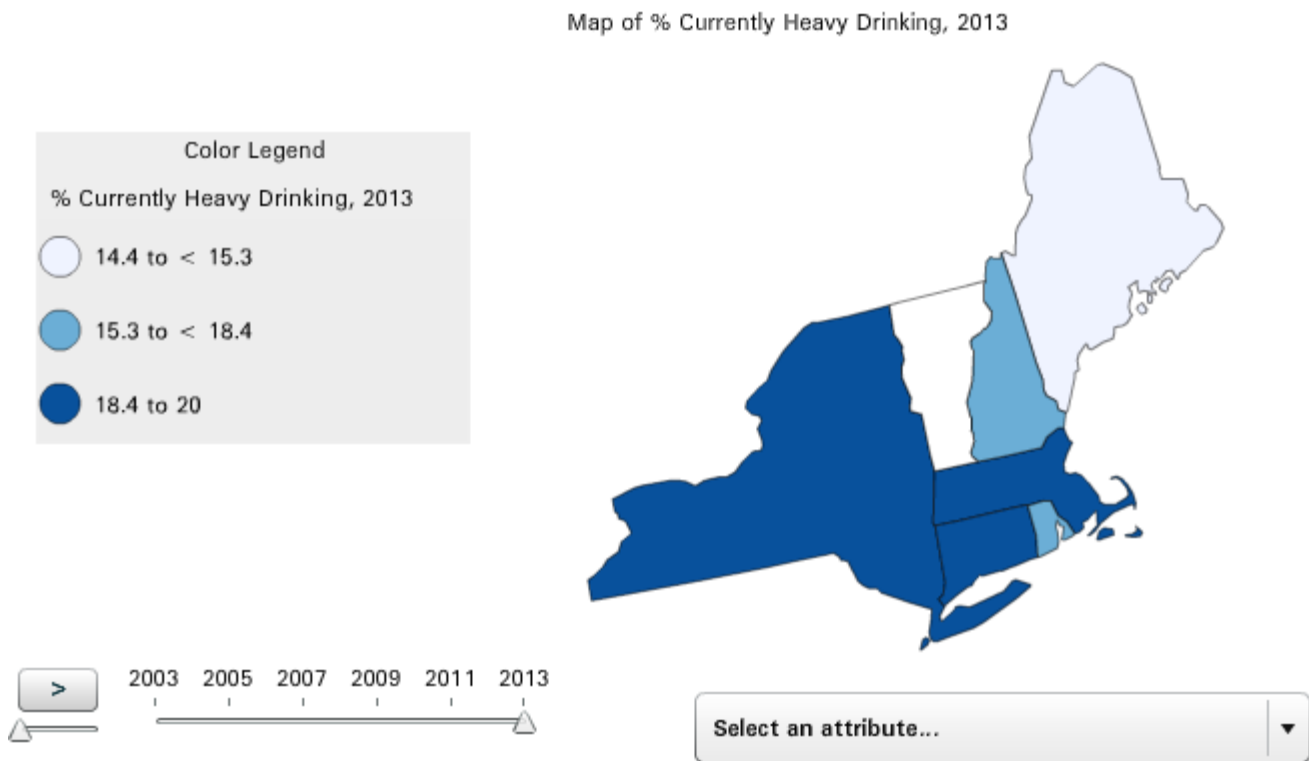

Combined Data Story Pages Introduction to the High School YRBS: Pages 8 and 9 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Alcohol and Other Drug Use

By 2013, an estimated 15.3% of Rhode Island high school students drank heavily in the past month.

This map is zoomed into New England states to give you a better view of Rhode Island high school student reports of alcohol and other drug use in relation to its neighbors. In 2003, an estimated 27% of Rhode Island high school students had 5 or more drinks of alcohol in a row within a couple hours on at least 1 day during the past 30 days. As you can see in the map, this isn't much different than its New England neighbors. Moving the time slider, heavy drinking appears to be trending down among the New England states.

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Sexual Behaviors that Contribute to Unintended Pregnancy and STDs

The following YRBS indicators are available on the DataHUB in the category "Sexual Behaviors that Contribute to Unintended Pregnancy and Sexually Transmitted Diseases (STDs), including HIV infection":

- **Ever had sexual intercourse**
- **Currently sexually active** - Had sexual intercourse with at least 1 person during the past 3 months.
- **Had sexual intercourse with 4 or more persons during their life**
- **Did not use a condom during last sexual intercourse** among students who were currently sexually active.

On the next page, you'll be able to explore potential relationships between alcohol and drug use and sexual behaviors.

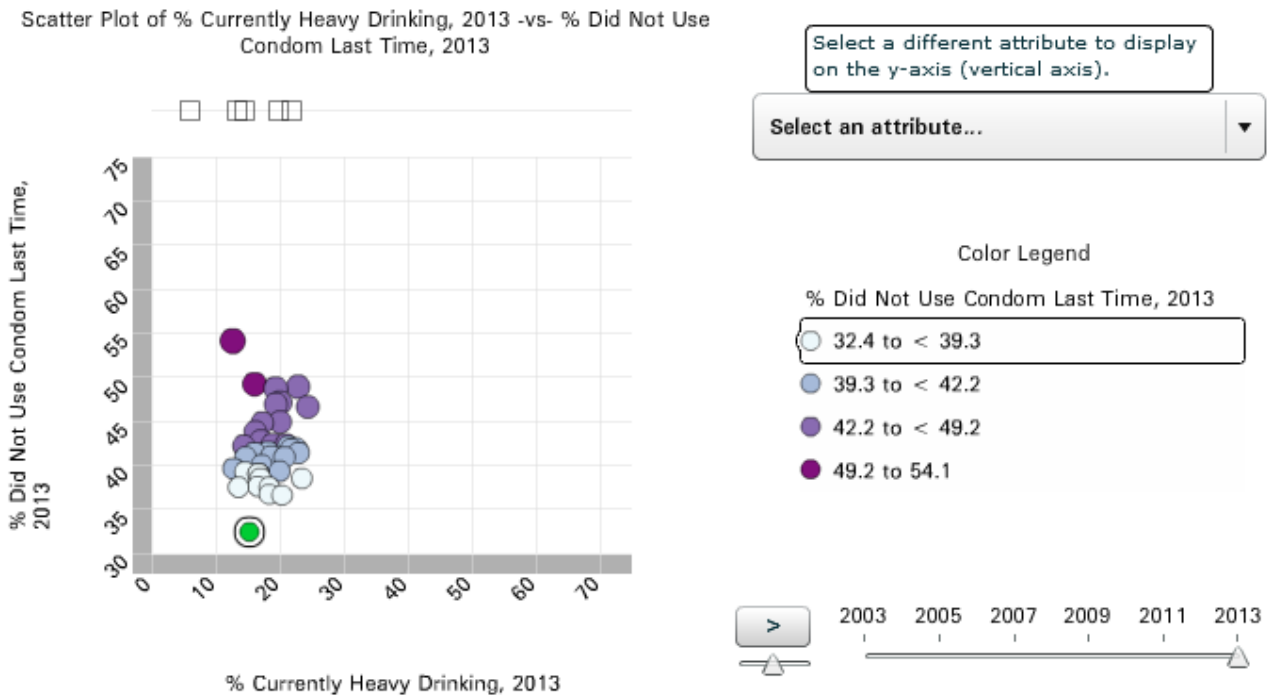

Data Story Page Introduction to the High School YRBS: Page 11 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Sexual Behaviors that Contribute to Unintended Pregnancy and STDs

Correlation between variables may be difficult to detect at a statewide level.

YRBS data are helpful for setting Rhode Island in context *and* for exploring relationships between variables at a national level that may help determine what to look for in Rhode Island. On this scatterplot, you can look for possible relationships between Sexual Behaviors and Alcohol and Drug Use. For example, the default scatterplot shows the percent of sexually active students who did not use a condom the last time they had sexual intercourse on the *vertical axis* and the percent of students reporting they engaged in binge drinking at least once in the past month on the *horizontal axis*. Rhode Island is the **light green** circle with a white border. Remember that just because there appears to be a correlation, or relationship, between two variables does not mean that one variable **causes** another to change.

Data Story Page Introduction to the High School YRBS: Page 12 of 16

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Physical Activity & Obesity and Dietary Behaviors

The following indicators are available on the DataHUB in the category "Physical Activity & Obesity and Dietary Behaviors":

- **Watched TV 3 or more hours per day** on an average school day.
- **Did not attend physical education classes daily** - 5 days in an average week when in school.
- **Were obese** - Students \geq 95th percentile for body mass index by age and sex, based on reference data.
- **Ate vegetables less than three times per day** (green salad, potatoes [excluding French fries, fried potatoes, or potato chips], carrots, or other vegetables, during the 7 days before the survey)
- **Drank a can, bottle, or glass of soda or pop at least 1 time per day** - Not including diet soda or diet pop, during the past 7 days.

On the next page, you can explore the relationship among these indicators in a scatterplot.

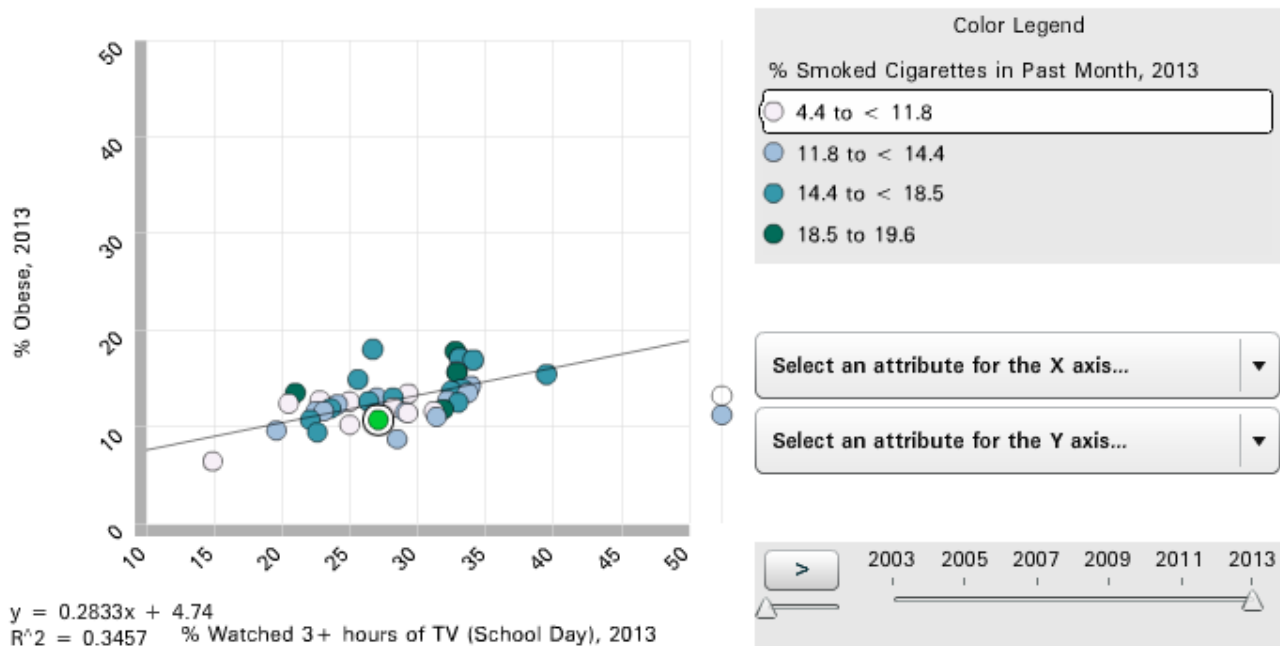

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Physical Activity & Obesity and Dietary Behaviors

Scatter Plot of % Watched 3+ hours of TV (School Day), 2013 -vs- % Obese, 2013

Obesity and television watching appear to be positively correlated, even at a statewide level.

On this scatterplot, you can look for possible relationships between students' Physical Activity & Obesity and Dietary Behaviors. For example, the scatterplot currently shows the percent of obese students on the vertical axis and the percent of students reporting they watched 3 or more hours of TV on a school day on the horizontal axis. The circles are colored by the percent of students who smoked cigarettes in the past month. Again, Rhode Island is the **light green** circle with a white border.

Here you can also select **any** of the indicators previously discussed in the datastory to look for possible relationships among factors students report. Click on the indicator names in attribute selector drop-downs on the right to revisit indicators about alcohol, drug use, sexual activity, unintentional injuries, or violence.

Data Story: Introduction to the National High School YRBS

Essential Question: What are the trends in health-risk behaviors, obesity, and asthma among youth and young adults in the U.S. and Rhode Island?

This data story provides an introduction to the indicators tracked in the school-based YRBS survey, which is conducted every two years by the Center for Disease Control (CDC) and local health authorities.

Concluding Remarks

This Data Story provided a brief introduction to the Youth Risk Behavior Surveillance System (YRBSS). The high school survey is a useful tool for understanding Rhode Island students' experiences in a regional and national context.

By comparing across all states we can see that Rhode Island students are less likely to participate in risky behaviors than their peers elsewhere. Over time, Rhode Island students' smoking rates heavy drinking have declined. However, the prevalence of risky behaviors among Rhode Island high school students remains at unacceptable levels.

Data Story: Introduction to the National High School YRBS
