

To Whom It May Concern,

It has been a pleasure working with Jonah Sims during his internship with the Voyant Development Team this summer. While computer science is not a formal academic focus for Jonah, his passion for solving challenging problems was transparently demonstrated throughout his time with us. He consistently showed an impressive ability to learn quickly, adapt to new challenges, and make meaningful contributions to our projects.

One of Jonah's most notable contributions was spearheading a research and development initiative on utilizing AI within our QA team's automation pipelines, aimed at reducing manual review time while enhancing the accuracy of quality verification. His work in this area required both technical curiosity and persistence, and he approached it with enthusiasm and professionalism. Jonah never shied away from a technical challenge, often dedicating his own time to researching solutions and expanding his skills.

Voyant was fortunate to have Jonah on our team this summer. His initiative, problem-solving skills, and commitment to contributing value made a lasting positive impact on our work. I am confident that his adaptability and drive will serve him well in any future endeavor.

Sincerely,
Brandon Benson
VP of Software Development
