Attack Investigation and Response: Forensics collection, Incident visibility, MITRE mapping, Threat hunting, Automated attack chain full sterilization, Encrypted files restoration	+	+	+	+		
Threat Intelligence: Powered by ThreatCloud™, Automated IoC and IoA cloud sharing	+	+	+	+		
Content Disarm & Reconstruction (CDR): Threat Emulation (Sandbox), Threat Extraction		+	+	TE for file system	+	
Data Protection: Host encryption, Media encryption			+	+		+

What are the current in-browser protection capabilities?

- Zero-day phishing site protection
- Corporate password reuse
- URL filtering
- SSL visibility
- Threat Extraction
- Threat Emulation in the browser on download files

What are the differences between Harmony Browse and Harmony Endpoint Basic?

- The offering difference - Harmony Browse includes the CDR capabilities (Threat Emulation and Threat Extraction) that Harmony Basic doesn't have
- The target customers difference - Harmony Browse target segment are either:
 - Customers with existing endpoint security solution that wants to add advanced web & network protection capabilities on top of the existing solution using our managed browser's extension (no additional agent installation needed)
 - Customers that want managed web & network protection without using GW device or endpoint agents
