

# Integrated Management Systems (IMS)

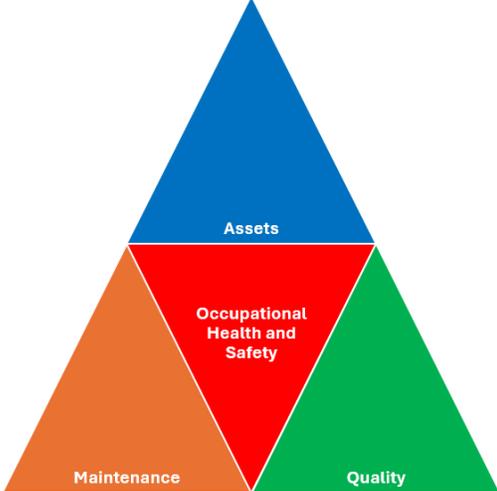

## Case: Process Improvement Proposal (PIP)

In the Upstream and Midstream sectors, complexity is a given. But how you manage that complexity defines your bottom line. At **PetroFlux.Energy**, we believe an **Integrated Management System** shouldn't just meet social pressure or certification requirements—it should drive your business forward.

We're helping operators transform operational risks into strategic opportunities by:

- Optimizing Costs:** Cutting maintenance and inventory overhead through smarter tracking.
- Protecting People:** Elevating Occupational Health & Safety standards beyond "compliance."
- Empowering Teams:** Accelerating technical career development for every staff level.
- Faster Insights:** Turning raw data into high-efficiency management graphics for quicker failure analysis.

Standardization isn't just about moving in the same direction—it's about moving toward excellence.

<ol style="list-style-type: none"><li>1. Asset Management Systems (AMS) → ISO 55001, 2015</li><li>2. Quality Management Systems (QMS) → ISO 9001, 2015</li><li>3. Asset Maintenance Management (AMM) → ISO 14224, 2016</li><li>4. Occupational Health and Safety Management Systems (OHSMS) → ISO 45001, 2018</li></ol>
