

STREET LEGALITY

Definition of Street Legal:

Where an electric bike or conversion kit is defined as Street legal, it means the electric bike or trike is considered street legal under Australian Electric Bike Regulations to the best of our knowledge. Those products are viewed as bicycles, not motorized vehicles, without the need for insurance, a license plate, or a driver's license. It is important for you to check your latest province/state, county, and local laws to ensure that you are riding legally and safely.

Pathways, Parks, and Trails:

Please note that Street Legal does not mean you can ride your electric bike or trike on any bicycle pathways; parks and trails may have their restrictions against the use of electric assist bikes.

Modifications and Responsibility:

By modifying electric bikes or conversion kits settings, upgrading components' capacity such as the controller or motor, the product might lose its street legality, no matter who does the modification. In case of bike default setting or component modifications, ZIMEMO PTY. LTD. assumes no responsibility for fines, damages, loss, or other consequences resulting from riding such a bike.

ZIMEMO PTY. LTD. assumes no responsibility for fines, damages, loss, or other consequences resulting from riding the bike on public roads where, according to local rules and regulations, the bike is not considered street legal or for whatever reason should not be ridden on such roads.
