## PERSONAL PROFILE

I am a clinical psychologist with a specialist interest in working with people with neurological conditions. I am currently working toward eligibility for entry onto the Specialist Register of Clinical Neuropsychologists (SRCN), of the British Psychological Society (BPS), to further my knowledge and expertise in clinical neuropsychology. I conduct neuropsychological assessments of cognitive functioning, to inform therapeutic interventions. I have experience working with a range of neurological presentations, including traumatic brain injury, stroke, progressive neurological conditions and dementia. I understand the importance of a holistic approach to care, which involves the system around the individual, to maximise efficacy of clinical interventions. I am passionate about advocating for the needs of an individual after a brain injury and facilitating psychological adjustment. I work across several NHS teams in addition to my private practice, which has given me a good understanding of the barriers to access which many individuals face in receiving co-ordinated care following traumatic brain injury.
