Personal Profile

I am a highly motivated Assistant Psychologist and British Psychological Society (BPS) graduate member with a background in brain injury, complex orthopaedic and major trauma cases. I have experience assisting with the comprehensive multidisciplinary rehabilitation of individuals with acquired and degenerative neurological conditions, including traumatic brain injury and stroke. I have supported the rehabilitation of patients presenting with complex orthopaedic injuries and major trauma, including RTA-related injuries, chronic pain conditions, and post-surgical recovery.

My role as an Assistant Psychologist has required dynamic working across community multidisciplinary team (MDT) settings. I have frequently collaborated with neuropsychologists, occupational therapists, physiotherapists, speech and language therapists, and case managers to support the implementation of individually tailored care plans. I have provided a diverse range of interventions across the lifespan to support the cognitive, emotional, and functional recovery of patients. Under the supervision of a Practitioner Psychologist, I have delivered psychological interventions which draw on the principles of cognitive behavioural therapy, supported patients to understand perpetuating and precipitating factors contributing to their difficulties, and supported patients to implement emotional-regulation strategies. I have worked with young people and their families to provide support around the systemic impact of neurological conditions and conducted classroom observations to inform comprehensive neuropsychological reports. Additionally, I have first-hand experience supporting Rehabilitation Assistants (RAs) to formulate and deliver behavioural support plans, to ensure high standards and continuity of care and intervention implementation.

As an Assistant Psychologist, I am responsible for supporting with the neuropsychological assessment of a variety of cognitive presentations. My responsibilities include interviewing, administering neuropsychometric tests, supporting with report writing and assisting with delivering patient-friendly feedback sessions and ongoing interventions.

Having worked across clinical rehabilitation and medico-legal settings, I have experience working in the context of ongoing serious injury litigation. I have a strong understanding of the importance of goal-directed rehabilitation packages and strong clinical note keeping.
