

Release 41.6 - The Highlights

Release 41.6 is now available, with a total of 416 changes. Here are the top features in this release:

- Multi-Factor Authentication (MFA) is introduced in this release, adding an optional extra layer of security by requiring a second step to verify your identity when signing in.
- As another security feature, individual passwords can be set for MDS and managed from within Alpha Tracker and Alpha Tracker Mobile.
- The Lab Sample Exchange feature is launched, enabling easy sending of sample data to Alpha Tracker labs and returning of analysis results and certificates.
- AI summaries have been introduced on various screens.
- The new risk assessment scoring method for the Australian regulations is now available and you can switch it on for individual clients.
- Changes to milestones allow for the Project Type on a project changing and for No Access to Site not to register as data received in the project.
- The location of the controls over Client Portal logins has changed.
- There are additional controls over who can edit diary appointments.
- It is now even easier to close a batch of projects.
- A new tab on Project Types lets you easily see which qualifications are required for a Project Type if you use the Staff Training Matrix.
