

Release 41.5 - The Highlights

Release 41.5 is now available, with a total of 592 changes. Here are the top features in this release:

- Additions and improvements to the Invoice screen
- A new, improved method to log Fibre Analysis Microscope times
- Your Water Hygiene clients on the Client Portal can now easily update outlets eg to record temperatures
- There is a new synchronisation method available for Water Hygiene in the Alpha Tracker Mobile app
- Single Sign-on is now supported on the Alpha Tracker Mobile app
- The Alpha Tracker Mobile app has a number of other additions and improvements
- The Asbestos Register from Site Details has a new tabbed view
- There have been further improvements to both individual and combined registers for Hazmat users
- The display of information from QR codes is now clearer and cleaner
- The Master Project Import includes new logic for checking whether a site already exists, based on the site name plus UPRN or just the UPRN
- Key milestones have been changed to automatically progress projects when there are no samples
- Further key milestone changes affect projects where there is No Access to the site as Surveyor First and Last Day Onsite will no longer be updated
- A separate Site Diary Tracker Air app is available to Air users which allows the diary entries to be sent into the project independently of certificates.
