

BUILDING WITH ADOBE

- **Adobe is made out of Earth with a high clay content mixed with sand and straw**
- **It is formed into bricks and sun-dried rather than kiln-dried, conserving more energy and is a better option for the environment**
- **Adobe brick building is an ancient technique, with these buildings lasting for hundreds of years**
- **Bricks are held together with clay, much like cement with traditional concrete, but are better for you and the environment**
- **Adobe bricks are fireproof, durable and water resistant**
- **They are non-toxic, biodegradable and eco-friendly**
- **Adobe allows for flexibility in design and construction**
- **Adobe walls can be plastered with a variety of naturally sourced plasters or even a natural "stucco" look**
- **You can easily create many unique and beautiful architectural features with adobe**
