

Rain Barrels Can Help Preserve Mother Earth

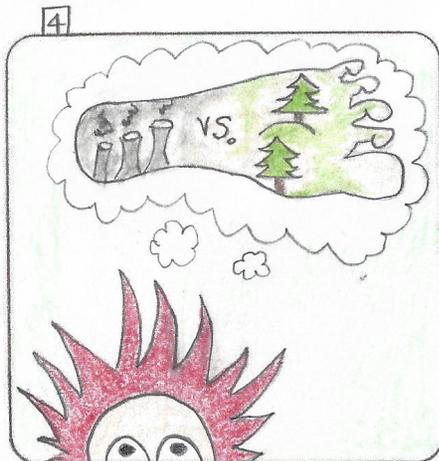

Hey, look what I just got!
It's a rain barrel and it
collects rainwater.

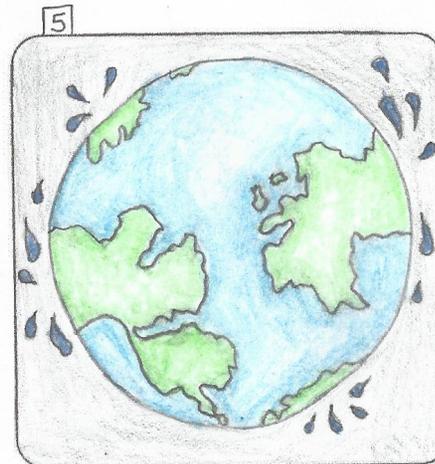

My family and I can use the
rain water to keep our plants
and grass hydrated and to
clean our tools!

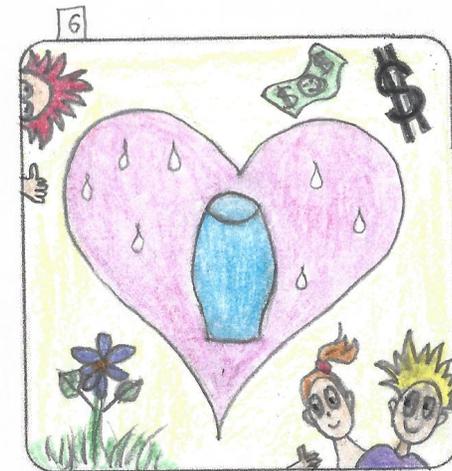

This allows us to save water
and the energy that's
required to bring water to
and from our homes.

The rain barrel reduces our
footprint on the Earth, as
less water is taken from
local lakes, rivers and
streams.

In addition, we will be helping
to stop excessive run-off
during storms which moves
pollutants and can cause
erosion.

I am not the only one happy,
my garden is smiling and my
parents are looking forward to
the money we will save from
our new rain barrel!
