America is a beacon of hope to the World, and those who inhabit such, as a complex network of lives; many nations do not share the values, we have and express, here. Serving with Federal government agencies, has provided the opportunity, to help, through the bigger picture. This opportunity is not typically available, to such positivity, as in academia and private industry, alone, or without integration. Many people, are taken advantage of, every day, and while not being a hero, myself, while working together, with people from all around the World, with these U.S.A. Critical Public Service agencies, has allowed the American Dream, be just that much more ecological and existent, to all. Weather, this be protecting America from the introduction of harmful pathogens, that cause devastating diseases, to our crops, and plants, with M.R.P's A.P.H.I.S.-P.P.Q.-F.O.'s Plant Germplasm Quarantine Program, or providing a genetic preservation and conservation area, for exotic animals, with the Smithsonian's National Zoo, or developing crops, to be more physiologically and pathologically resistant, with U.S.D.A.-R.E.E.'s Agriculture Research Service or Reducing War and Protecting Others, with the State Department; all have provided me, the opportunity, to serve America, with our Allies, proudly, to help others.

Efficiency and effectiveness, are important, however, education and experience, are more critical; waste and corruption, are rampant, throughout government(s) and industry, and serving America, has provided the opportunity, to correct, such; no one is perfect, and America, allows second chances, to those who deserve such. It is critical however, to use these positions and opportunities, wisely, to help others, who need the Federal Government's assistance, weather this be, internal to agency, or external to the stakeholders, and non-stakeholders. While, with APHIS, I was able to help improve and streamline crop protection methods, and assertively insert myself, against some of those, who choose, to use such positions, for personal gain, rather than rights enforcing betterment, of the USA, while protecting crops from harmful viruses. At, the Smithsonian, I was able to stand up for those, who were being taken advantage of, and speak up against wrong doing, while, protecting Animals, from all around the globe, and with ARS, I was able to help develop better methods, applications, and operations, that rooted out, deficiencies, and increased positivity, for this complex World. With DHS and DOS, countless lives have been saved, wars averted, and famines prevented, amongst else, to increase these, and Liberty.

Please ponder my resume, or talk with associates, to see and understand, how we have been able to advance non-partisan and holistic policy, together, from the bottom up, and the middle out; as for, the present and future, I hope to continue to do this, and provide, the World Dream, to others, through continued positive, public service, with critical USA Federal Government Agencies, such as APHIS. The Deferred Resignation Program, defunding of public media (VoA, etc.) and foreign aid (USAID), and RIF's to critical agencies, are all prime examples, of not considering the holistic picture, or analyzing complex thought critically and positively, in a publicity stunt, prevailing, over what is best, for all. I have chosen, to speak up, and act against this and much more, while taking action with the USA's DOS and DHS, in a more bipartisan approach, that requires critical thinking and complex thought, not social popularity methods alone. APHIS, ATF, and the CIA, among other agencies, are much more, or supposed to be, more bipartisan and nonpolitical agencies, that help control and guide, the World, as grander picture action(s), to a more positive direction, and light. Advancing the World, through this happens every day, with U.S.A.-D.o.S..

I have always had a strong professional and official work ethic, and such has then allowed me, with many others, to create, a positive, critical, and transparent, ripple effect, that has echoed, as action, around this terrestrial and marine body, we all co-exist on, together, as complex ecological organisms. Hard, yet smart and intelligent, work teaches you ingenuity and values while helping you gain experience, and then provides the opportunity to gain more education, in order to, keep increasing, positivity, service, and opportunity, those around you, both immediately, and non-immediately. Participating with critical and complex, methods and operations, with APHIS, the Smithsonian, ARS, CIA, DoS, & DHS, seems difficult to many, at times, but to me such is easy, as I have already gotten, the difficult parts, out of the way, several times, in the past. As for, the present and future, I hope to continue protecting crops, taking care of Animals, while assisting others officially, and participating with methods and operations, together, as to offer a brighter alternating current, path forward for all; riding the waves, and understanding how to do so, allows you to help others do the same, and ripple positivity, around the globe.
