

Water Catch-Pot & Shut-Off Valve Housing

Benefits

- LOW COST ENHANCEMENT
- AVOIDS COSTLY REPAIRS
- PROTECTS GAS ANALYSER
- AVOIDS LIQUID OVERFLOWS
- AUTOMATIC SHUT-OFF

The FIL-120 Filter is a low-cost housing for your gas analyser's protection.

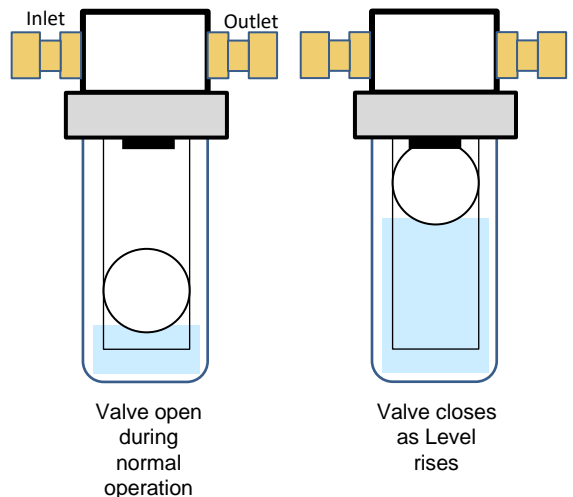

Analyser protection often means using a 'particulate' type of filter to remove liquids and solids. However, when using particulate technology the filter can overflow and contaminate the sensitive and expensive electronics of the instrument.

The FIL-120 Filter eliminates concerns.

Any surplus liquid is collected in the bowl. As the liquid level rises so does the float until it shuts off the flow to the analyser and any possibilities of analyser damage are avoided, ensuring continued use without damage and costly repairs.

Protect your gas analyser. Service provided on a Supply and Fit or Supply Only basis.
